Mechanisms of Host Receptor Adaptation by SARS coronavirus

Figure S1

Expression levels of SARS-CoV spike proteins packaged in pseudotyped retroviruses and human ACE2 expressed on HEK293T cell surfaces. The SARS-spike proteins and human ACE2 contain C-terminal C9 tag and HA tag, respectively. The expression levels of the spike proteins and human ACE2 were detected by Western blotting using anti-C9 and anti-HA antibodies, respectively, and quantified using software Image J (version 1.6).
