

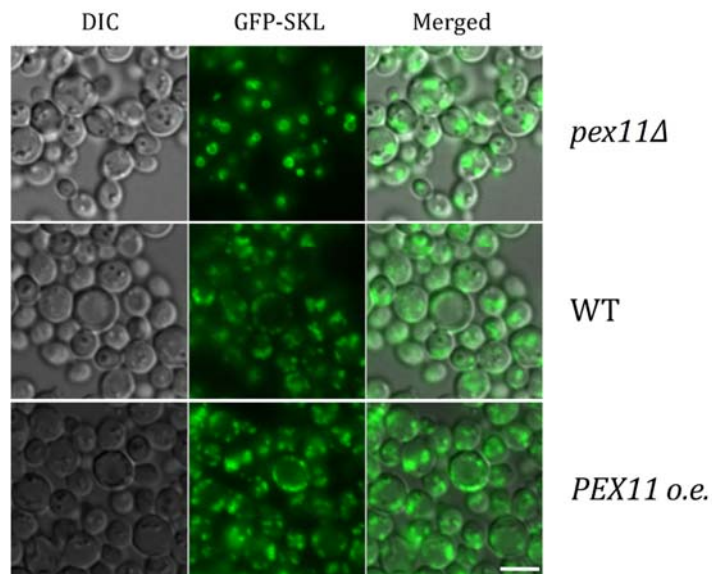

Figure S1

SUPPLEMENTARY FIGURE S1. Peroxisome morphology of *pex11Δ*, wild-type (WT) as well as *PEX11* overexpression strains in oleate medium. *pex11Δ* cells, cells expressing wild-type (WT) Pex11p, as well as cells over-expressing Pex11p (*PEX11 o.e.*), were grown in YPD and transferred to oleate medium and incubated 6-8 h and analyzed by microscopy. All the strains also contained GFP-SKL expressed from *GAP* promoter for monitoring peroxisomes. DIC, differential interference contrast. Scale bar, 5 μ m.
