

Supplementary information, Figure S8

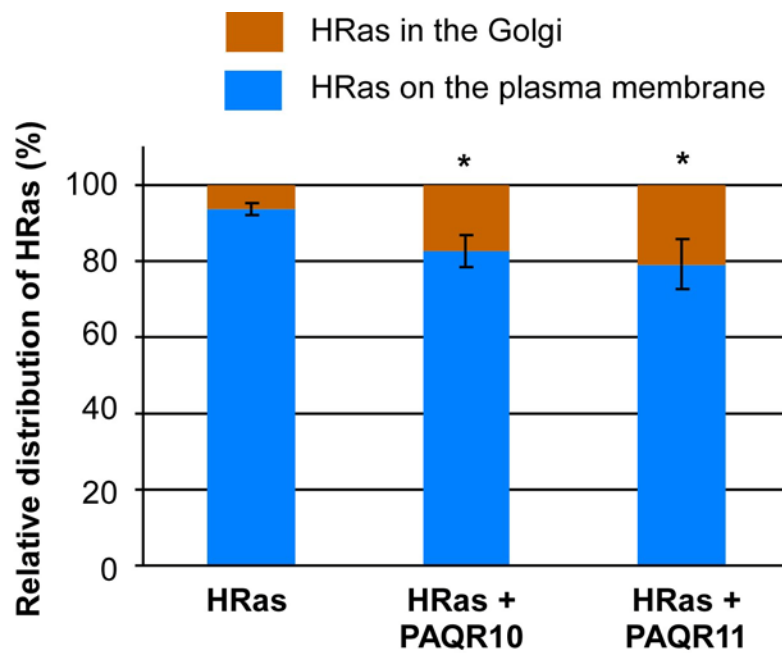

Figure S8 The distribution of HRas on the plasma membrane and Golgi apparatus is affected by PAQR10/PAQR11 overexpression. The relative signal intensity of HRas on plasma membrane (PM) or in the Golgi apparatus based on the data for Figure 2A was quantified and shown as mean \pm SD. * $P < 0.05$ as compared to the HRas alone group for both Golgi and plasma membrane distribution.
