

Supplemental Fig. 1

1 **Supplemental Fig. 1.** Microarray scatter plot showing pooled data of
2 transcripts involved in adrenal steroidogenesis from 4 zona glomerulosa (zG)
3 and 4 zona fasciculata (zF) samples. Each spot indicates a unique probe for
4 *Star*, *Cyp11a1*, *Hsd3b1*, *Cyp21a1*, *Cyp11b2* and *Cyp17* transcripts based on
5 normalized microarray data. A dot outside of the parallel lines represents a
6 transcript with greater than two-fold differences in expression.
