Fig. S1 Binding of leukotriene C4 with tablysin-15 before and after reversed phase chromatography in acetonitrile: water. (A) Heats measured on injection (10 μ L per injection) of LTC4 (50 μ M) into a solution of tablysin-15 (5 μ M) that had not been purified by reversed phase chromatography. (B) For comparison, the same experiment as (A) with tablysin-15 that had been purified by reversed phase chromatography. (C) Enthalpies per injection for experiment shown in panel (A). (D) Enthalpies per injection for experiment shown in panel (B).
