

SVM parameter optimization: Training sets of different sequence window datasets were trained under 10-fold cross-validation using various combinations of C and γ values. The optimal C and γ values for each training set are used to train the final SVM classifier. Optimal values are indicated below the corresponding chart.

C=1 and $\gamma = 0.01$

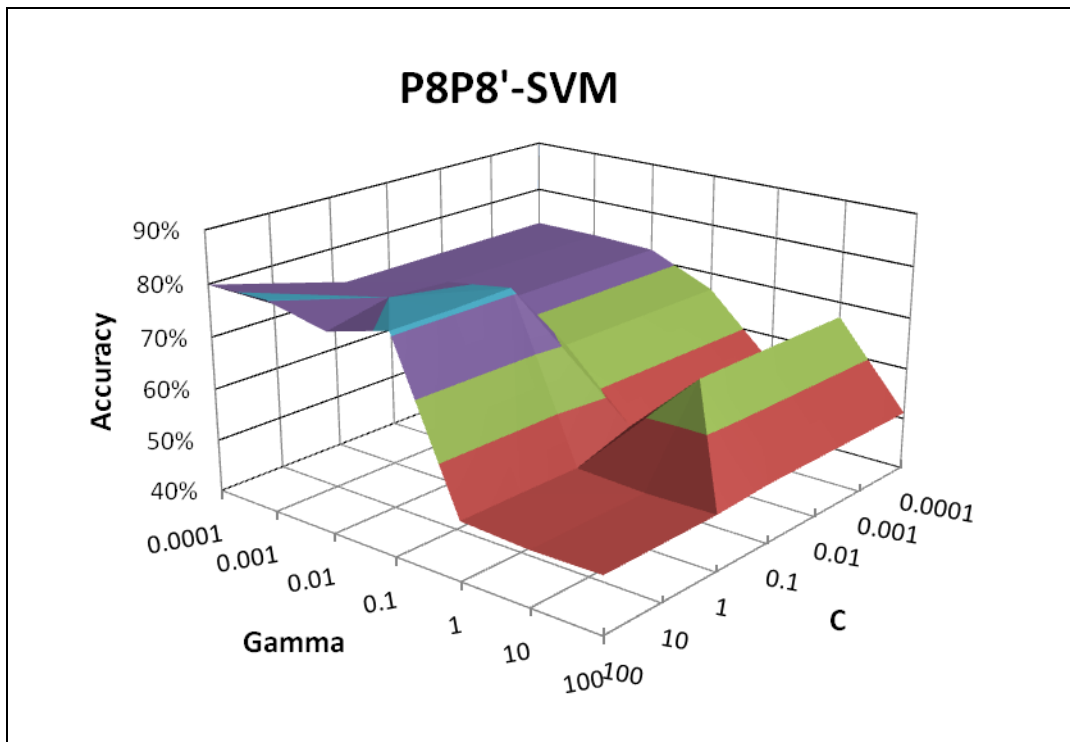

C=10 and $\gamma = 0.0001$

$C=1$ and $\gamma=0.1$

$C=10$ and $\gamma=0.0001$

$C=1$ and $\gamma=0.1$

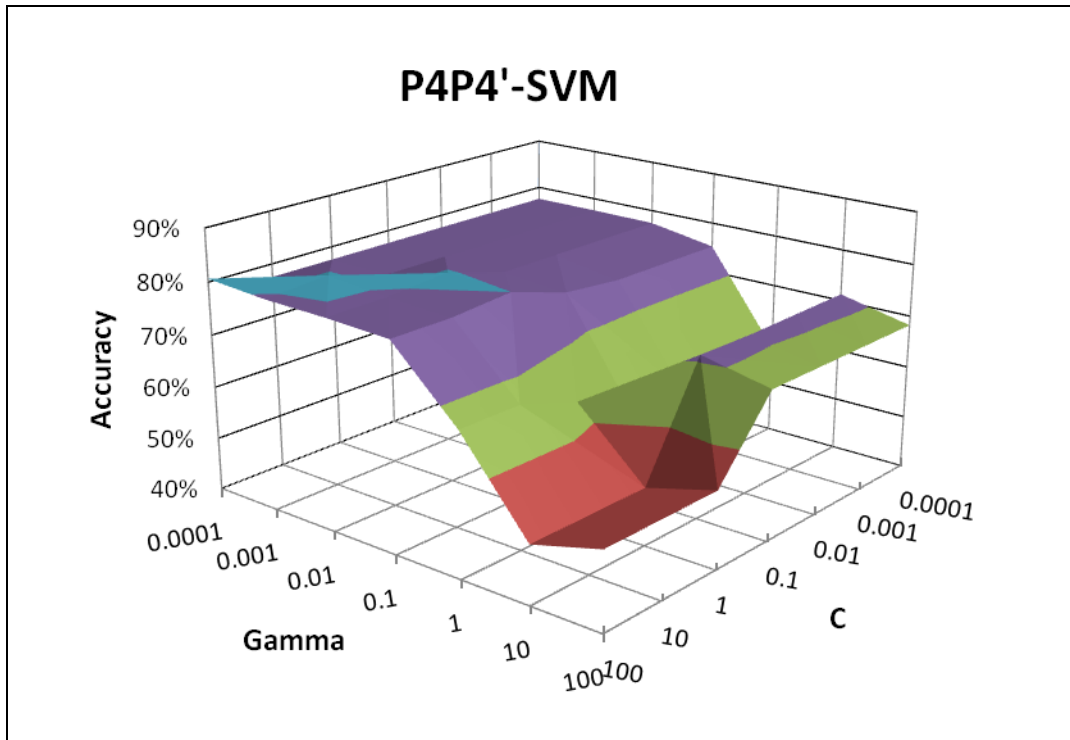

$C=100$ and $\gamma=0.0001$

$C=100$ and $\gamma = 0.001$

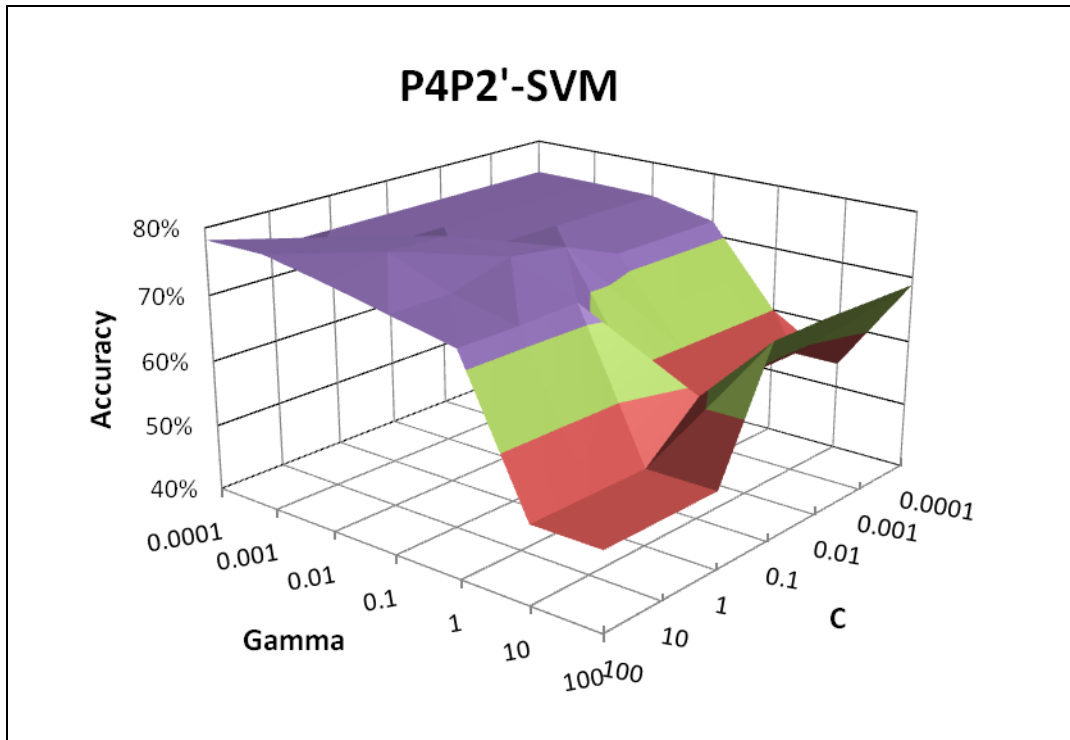

$C=100$ and $\gamma = 0.0001$

$C=10$ and $\gamma=0.001$

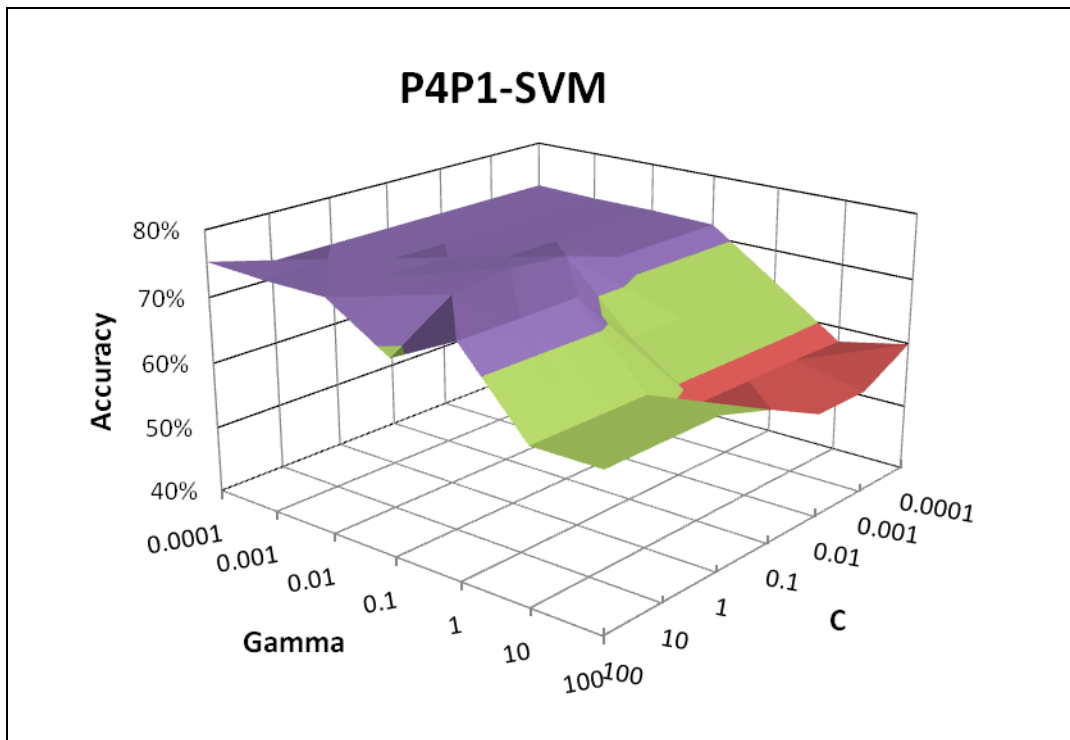

$C=10$ and $\gamma=0.0001$

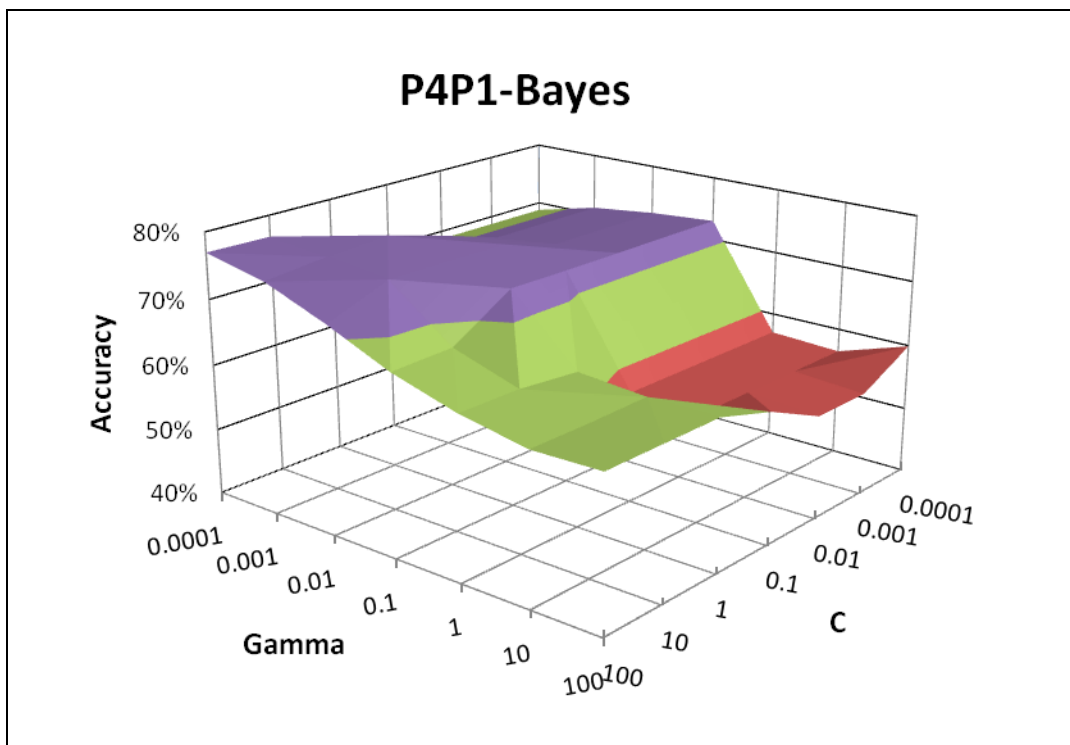

$C=100$ and $\gamma=0.001$

$C=10$ and $\gamma=0.0001$

$C=1$ and $\gamma=0.1$

$C=100$ and $\gamma=0.0001$

$C=100$ and $\gamma=0.001$

$C=100$ and $\gamma=0.001$
