Amsterdam, Kruislaan 320, 1098 SM Amsterdam, the Netherlands.

Supplementary Figure 1. Genetic map of *hpl1*. DNA markers used to distinguish *Col-0* and *Ler* chromosomes are shown with diamonds or triangles. The black bar shows the region where *Col-0* genotypes were identified.

Supplementary Figure 2. The amounts of volatiles in the headspace of fully disrupted wt and *hpl1* leaves.
