

Complete cellular localization results

The similarity to the human proteome of the pathogens versus the nonpathogens is shown for proteins having different subcellular localizations.

Proteins with cytoplasmic localization in Gram-negative bacteria

Proteins with cytoplasmic membrane localization in Gram-negative bacteria

Proteins with extracellular localization in Gram-negative bacteria

Proteins with outer membrane localization in Gram-negative bacteria

Proteins with periplasmic localization in Gram-negative bacteria

Proteins with cell wall localization in Gram-positive bacteria

Proteins with cytoplasmic localization in Gram-positive bacteria

Proteins with cytoplasmic membrane localization in Gram-positive bacteria

Proteins with extracellular localization in Gram-positive bacteria
