

Figure S3

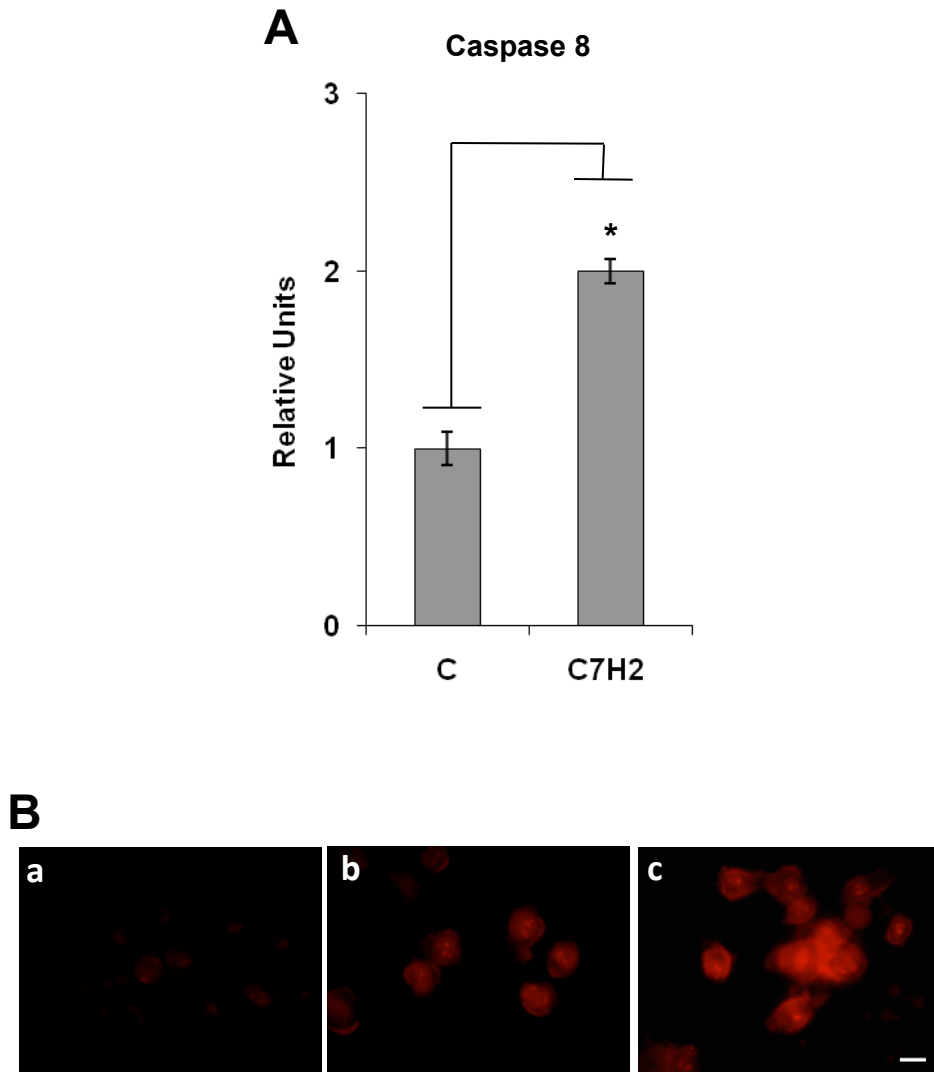

FIGURE S3. Caspase 8 activation and superoxide production induced by C7H2 peptide. A. HeLa cells incubated with C7H2 for 40 min induce increased production of caspase 8 analyzed by colorimetric assay. B. Anion superoxide produced by HeLa cells treated with 0.3 mM C7H2. (a) untreated cells; (b) positive control with 5 mM H_2O_2 ; (c) cells treated with C7H2. Anion superoxide production detected with dihydroethidium (DHE) by fluorescence microscopy. Bar, 20 μ m.
