

Supplementary Fig. S7

Supplementary information, Figure S7 The depletion of MULAN in HeLa cells by shRNA increased cell growth. HeLa cells were infected with lentivirus expressing negative control shRNA or MULAN shRNA. The cells were selected with 5 $\mu\text{g/ml}$ puromycin for 2 weeks. The cell growth was determined by counting using a hemocytometer every 24 h. The data represent the mean of three independent experiments (mean \pm standard error are shown).
