

Figure S2
Eng et al 2012

Figure S2. Cells infected with SFV- Δ Spike show normal capsid expression and reduced autophagosome accumulation relative to those infected with wt SFV.

HOS-EGFP-LC3 cells were mock infected or infected with wt SFV or SFV- Δ Spike at MOI 2. At 8 hpi, cells were fixed and stained for SFV capsid (red) and analysed for EGFP-LC3 positive puncta by confocal microscopy. Hoechst was used to identify cell nuclei (blue). Representative images are shown.
