

Figure S2. Enhanced ISG and *IFN-β* induction in intranasally VSV-infected *Ifit2*^{-/-} brain regions. *IFN-β*, and *Ifit3/2/1* mRNA levels in different regions of brains of uninfected or VSV-infected wt and *Ifit2*^{-/-} mice at 6 d.p.i., plotted as mean+SD. n=4 mice per infected group; ND, not done. Infections were intranasal with 4×10^2 pfu of VSV.
