

Histogram of SIs

Supplemental Figure Legends.

Figure S1. Distribution of wild type BY4743 survival integrals. The S.I. for individual wild type lifespans in all experiments reported was plotted, and the distribution was fit using the mean and standard deviation ($\mu = 3.002263$, $\sigma = 0.575539$). The Anderson-Darling test determined the distribution to be normal ($A = 0.4855$, $P = 0.2217$).
