

Supplementary information, Figure S3

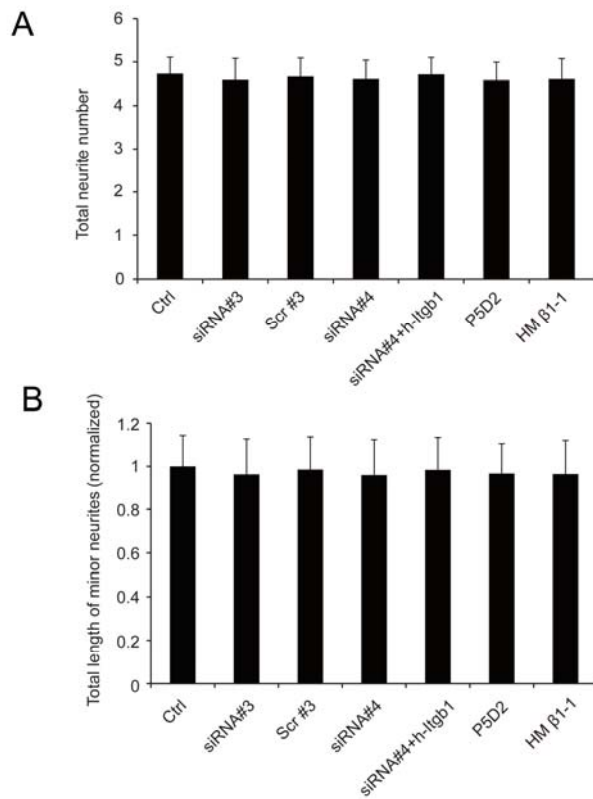

Figure S3 Itgb1 is dispensable for the growth of minor neurites. **(A, B)** Hippocampal neurons were transfected with indicated constructs or treated with function-blocking antibodies against Itgb1. Total neurite number **(A)** and total length of minor neurites **(B)** were quantified. Cells were plated on laminin substrates. Data are shown as mean \pm SEM of 150 neurons from three experiments. Total length of minor neurites from control group was normalized as 1.0.
