

Appendix

Supplementary Figure 1. Dose-response relations between \log_e (resistin) (A and B) and \log_e (adiponectin) (C) and AF are illustrated with generalized additive Cox models (adjusted for AF risk score [A] and for AF risk score + CRP [B and C]) using splines. Dashed lines represent 95% confidence limits of the resulting HRs.

Supplementary Figure 1

Resistin, Adiponectin and AF risk.
