Supporting Figure 3: A) schematic representation of the three arbitrary regions in the ELVd was dissected. B) PVX-based vector P2C2S and cDNAs (GFP/IV2/L-ELVd, GFP/IV2/R-ELVd and GFP/IV2/Up-ELVd) cloned under the control of the duplicated PVX-CP promoter. The chimeric vectors PVX-GFP/IV2/L-ELVd, PVX-GFP/IV2/R-ELVd and PVX-GFP/IV2/Up-ELVd are not drawn to scale. C) Partial sequences of the constructs used in this study. GFP (green text), IV2 (blue text) and partial-length ELVd (red text) cDNA sequences are showed according their cloning position in the vector. The *Kpn* I site used for (L, R and Up) ELVd cloning is shown in gray text.
