

A

Supplemental Figure 1

Time-dependent efficacy of steroids in inflammatory angiogenesis. Topical dexamethasone treatment started from day 2, 4, or 6 after IL-1 β implantation in corneas of BALB/c mice. **A)** Photomicrographs of IL-1 β -implanted corneas of BALB/c mice on days 2, 4, 6, 10, and 14 after the implantation with or without dexamethasone treatment. **B-D)** Quantitation of the number of angiogenic area (B), vessel number (C) or portion of vascular tips (D) in IL-1 β -induced angiogenesis on days 4, 6, 10, and 14 after implantation without (black) or with dexamethasone treatment from day 2 (gray), day 4 (red) or day 6 (blue) ($n=4-6$). * $P < 0.05$; ** $P < 0.01$.
