

sFig. 1. Effect of TGFβ1 on *MMP9* mRNA levels in human endometrial stromal cells. Cells isolated from various stages of the menstrual cycle were treated with vehicle (Ctl, open bars) or TGFβ1 (5 ng/ml, solid bars) for 48 h. Thereafter, mRNA levels of *MMP9* were determined by qPCR. Data represent mean ± SEM of 3 samples in each group for each prep. *P < 0.01 compared with control
