

**Table S1. EBV-regulated miRNAs during primary B cell outgrowth.** Exiqon v10.0 miRNA microarray data was analyzed using statistical analysis of microarrays (SAM) as described in the Methods section. Those miRNAs whose expression changed between any two groups of B, Prolif, or LCL with a false discovery rate less than or equal to 5% generated the universe of EBV-regulated miRNAs shown below. EBV-induced or EBV-repressed miRNAs were those which increased or decreased, respectively, in either B to Prolif, Prolif to LCL, or B to LCL with a p-value <0.05. Proliferation-defining miRNAs were those whose expression was significantly different ( $p<0.05$ ) between the Prolif sample and the B and LCL samples combined. The asterisks refer to star strands of miRNAs. Often both guide and star strands would be detected, but occasionally only the star strand met statistical significance.

#### **EBV-induced cellular miRNAs (ranked by B to LCL fold-change)**
