

Supplementary Data

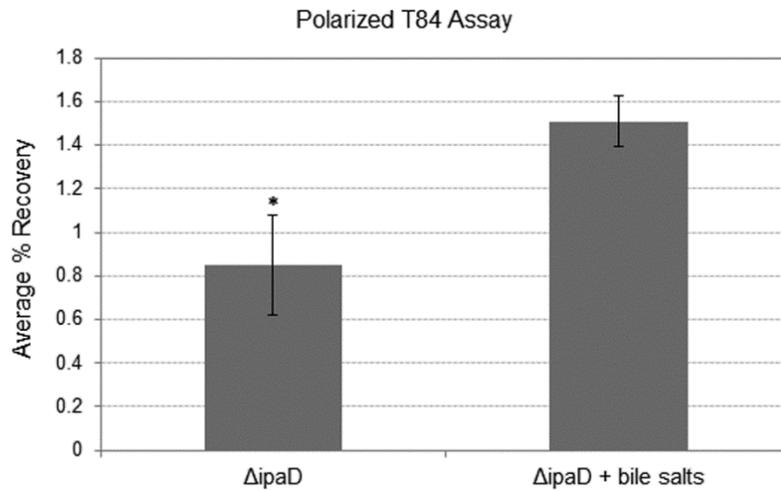

Supplementary Figure 1A: Exposure to bile salts does not significantly alter the growth of *Shigella flexneri*. An example of a growth curve is provided. 2457T was subcultured in tryptic soy broth (TSB) alone or with 0.4% w/v bile salts. Growth was measured over the course of 6 hours by taking optical density readings at 600 nm (OD₆₀₀). Bacteria exposed to bile salts grew at the same rate as bacteria subcultured in TSB alone, especially during mid-log phase. The data indicated that exposure to bile salts did not affect the growth rate of *S. flexneri*.

Supplementary Figure 1B: The virulence plasmid-cured strain BS103 grows faster than wildtype 2457T. An example of a growth curve is provided in which both strains were subcultured in TSB.

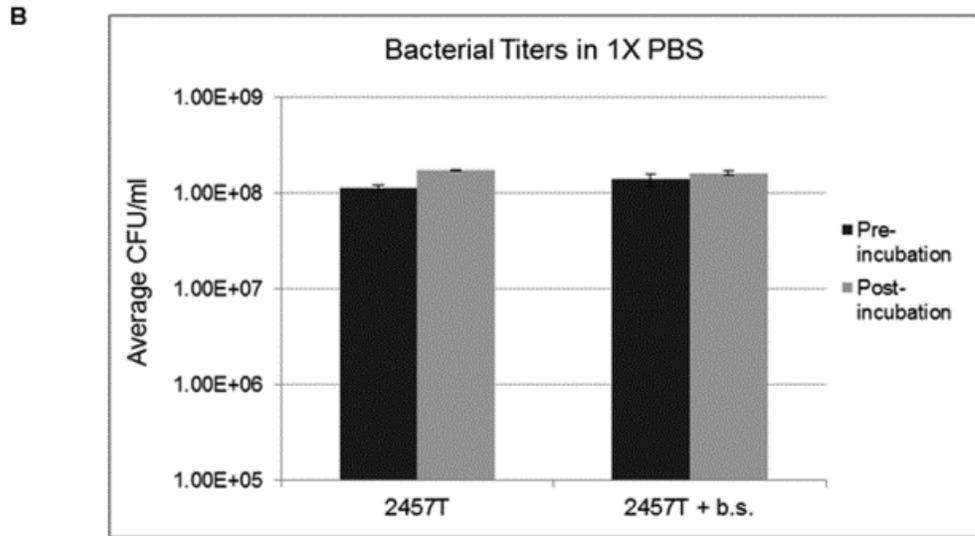

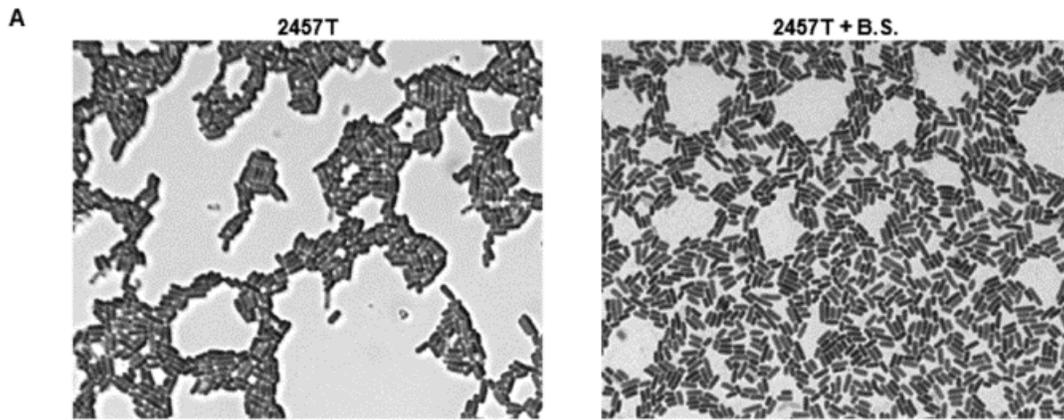

Supplementary Figure 2: Bile salts increase adherence of 2457T to a monolayer of T84 cells.

Bacteria were subcultured with or without 0.4% w/v bile salts and applied to semi-confluent monolayers of T84 cells for 3 hours. Wildtype *S. flexneri* strain 2457T consistently had a significant increase in adherence after being exposed to the bile salts during subculture. Analysis was performed for three independent experiments. Plotted is the average percent (%) recovery of the adherent bacteria +/- the standard error. * = p -value <0.01, as determined by the student's T-test.

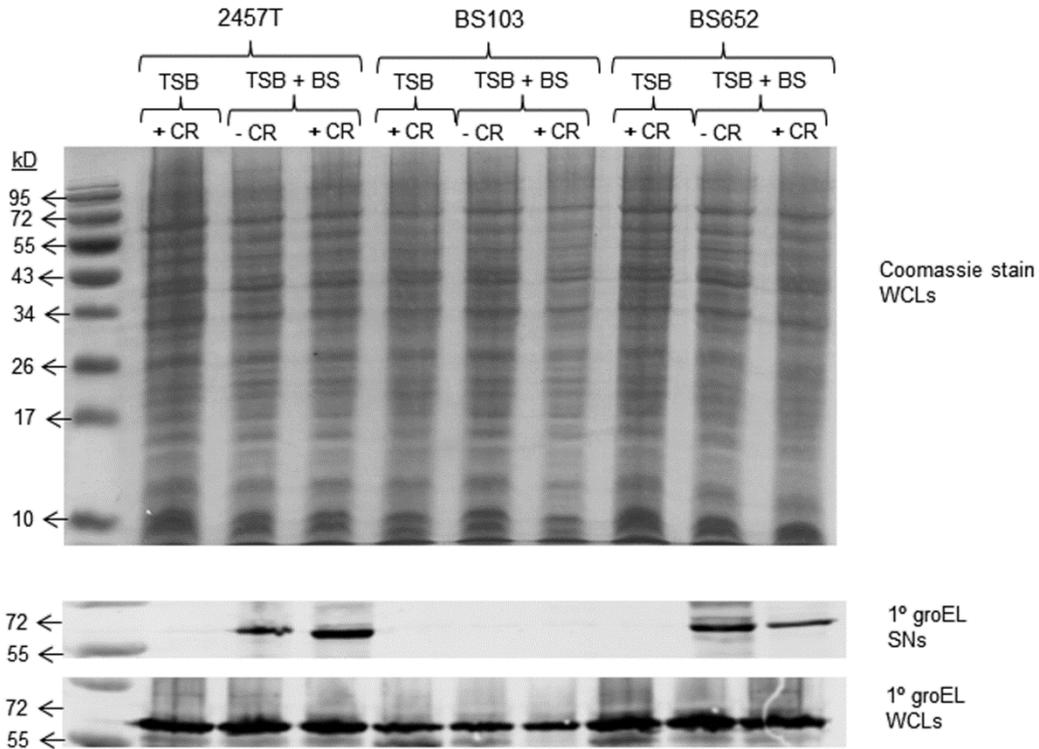

Supplementary Figure 3: The $\Delta ipaD$ mutant has increased adherence to polarized T84 cells after bile salts exposure. Induced adherence was detected despite the fact that this mutation causes induced secretion of T3SS effectors. This mutation was constructed in *S. flexneri* serotype 5 strain M90T. * = *p*-value of 0.028, as determined by the student's T-test.

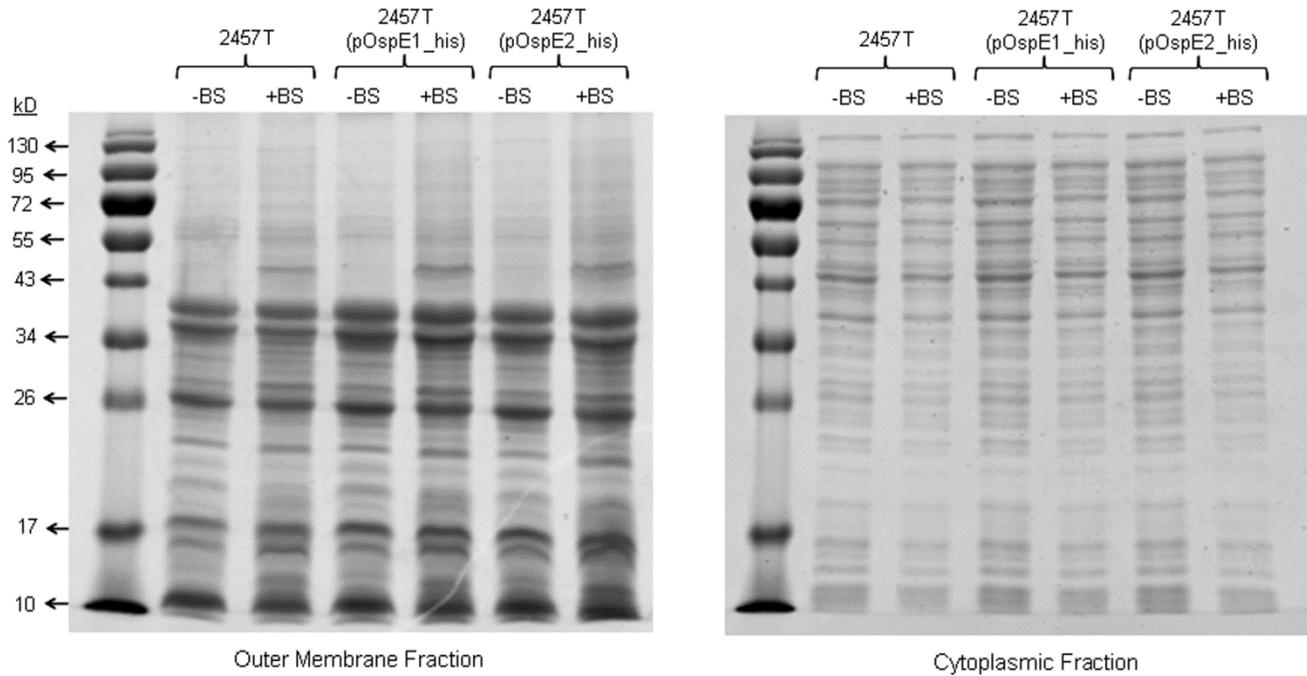

Supplementary Figure 4: Bile salts do not cause bacterial lysis. A: The bacteria were prepared as described in the Experimental Procedures for the protein secretion, immunofluorescence, and outer membrane localization assays. The bacteria were pelleted and Giemsa-stained to analyze bacterial cell morphology. Bacteria subcultured in both TSB with or without bile salts had a normal shape.

B: Bacterial viability was demonstrated by determining the bacterial titers (colony forming units (CFU)/ml) before and after incubation at 37°C for 1 hour in 1X PBS. The average recovered CFU/ml is plotted +/- the standard error. The data indicated that no significant lysis of the bacteria occurred.

Supplementary Figure 5: The induced protein secretion that occurs following bile salts exposure is not due to lysis of the bacteria. The CR assay supernatants from Figure 4 were probed with an antibody that recognizes the cytoplasmic protein GroEL. While GroEL was detected in the supernatants of 2457T and BS652 following bile salts exposure, the protein was not detected in the supernatants of the plasmid-cured strain BS103. The Coomassie-stained whole cell lysates and Western blot for GroEL are also provided.

Supplementary Figure 6: Protein profile of the outer membrane and cytoplasmic proteins obtained from ultracentrifugation of bacterial pellets. The outer membrane (OM) fraction is on the left while the cytoplasmic fraction is on the right. The predominant OM proteins obtained are localized around 20 kD and between 25 to 45 kD. The protein profile agrees with previous OM preparations of *S. flexneri*.

Supplementary Table 1. Gene Expression Differences with Bile Salts

Condition	Number of genes				
Increased with Bile Salts	51				
Decreased with Bile Salts	49

Supplementary Table 2. Primers used in this study.

Purpose	Forward Primer		Reverse Primer	
	Name	Sequence	Name	Sequence
Deletions				
Amplify <i>aphA-3</i> for <i>ospE1</i> deletion	E1kanF	5' – CTTGTCTTCCACAAAAACAAGA AAATATCATCCTTGAAGTATCAAA TCATATGAATACCTCCTTAGTTCC – 3'	E1kanR	5' – CTTTGTTTTTTCATCAATTCCGGCTT CATTATCTTTGTCAACCATTGCATTGTG TAGGCTGGAGCTGCTTC – 3'
Confirm Δ <i>ospE1</i>	E1F	5' – AGTCATCGGCTCCTTCATTG – 3'	E1R	5' – AGGTATTTAAGGTCATTGCG – 3'
Amplify <i>cat</i> for <i>ospE2</i> deletion	E2catF	5' – TTAATAAAATATAACATAAGGA AGCAATATGCTTACACAACTATATTC CTGTGTAGGCTGGAGCTGCTTC – 3'	E2catR	5' – TGGAGCTTAAACGAGTCTGAAATTAA CTTCAGAAATCAGAATACCGTTGGCATAT GAATACCTCCTTAG – 3'
Confirm Δ <i>ospE2</i>	E2F	5' – TCTGGCTCCACATCTCATCG – 3'	E2R	5' – ACCGTATCGAGGATAGATGG – 3'
qRT-PCR				
<i>rpoA</i>	rpoAF	5' – AGCGCGGTCTGTGGTTATGTG – 3'	rpoAR	5' – CGCTGCTTCAACATTGTAGG – 3'
<i>ospE1/2</i>	ospEF	5' – CACAACTATATCCCTTGC – 3'	ospER	5' – TTTCAACGTTTTTCGTCCGGT – 3'
<i>ccmF</i>	ccmFF	5' – TCGGCATTGTGCTCGGTTCC – 3'	ccmFR	5' – TGACCGCCAGTGAGTGCATC – 3'
<i>yhcN</i>	yhcNF	5' – GCTGCCGACTCCATTGATGC – 3'	yhcNR	5' – CCGTTGCGCCTTTCTCTTCC – 3'
<i>ybgQ</i>	ybgQF	5' – GGTGACGATCAGTCAATCAG – 3'	ybgQR	5' – TTCACCCGACCATCTTCTTC – 3'
Cloning				
Amplify <i>ospE1</i> for pCSF1	E1F	5' – AGTCATCGGCTCCTTCATTG – 3'	E1R	5' – AGGTATTTAAGGTCATTGCG – 3'
Amplify <i>ospE2</i> for pCSF2	E2F	5' – TCTGGCTCCACATCTCATCG – 3'	E2R	5' – ACCGTATCGAGGATAGATGG – 3'
Amplify <i>ospE</i> for pOspE ⁺	E3F	5' – ATGCGGATCCCAGTAACTTC ATTTAGCCGAC – 3'	ER2	5' – TCAGAAATCAGAATACCGTTGG – 3'
Amplify <i>ospE1</i> for pCSF3	E3F	5' – ATGCGGATCCCAGTAACTTC ATTTAGCCGAC – 3'	EhisR	5' – TCAATGATGATGATGATGATGATG GAAATCAGAATACCGTTGGC – 3'

Amplify
ospE2 for
pCSF4

E3F

5' – ATGCGGATCCCAGTAACTTC
ATTTAGCCGAC – 3'

EhisR

5' – TCAATGATGATGATGATGATGATG
GAAATCAGAATACCGTTGGC – 3'
