

Supplemental Figure 1. Kim et al.

Supplemental Figure 1 Legend

Plasmin-derived α -syn fragments are detected by an α -syn antibody which detects the C-terminal region of α -syn or Coomassie Blue staining. A. After incubation of 1.735 μ M α -syn with plasmin at the indicated molar ratios for 12 hr at 37°C, (B) after incubation of 1.735 μ M α -syn with plasmin at the 1:0.04 molar ratio for the indicated times at 37°C, the samples were loaded into SDS-PAGE gels, then Western blots for α -syn (Santa Cruz Biotechnology, Santa Cruz, CA) were performed. C. After incubation of 1.735 μ M α -syn with plasmin at the indicated molar ratios for 12 hr at 37°C, the samples were loaded into SDS-PAGE gels, then Coomassie Blue staining was performed.

Supplemental Table I. Observed peptides by LC/MS/MS analysis
