

Suppl. Table 2. Numbers of sample probes significantly (FDR < 0.05, corrected for multiple testing) differentially regulated at the mRNA level between UKF-NB-4 and UKF-NB-4^{Hi} cells or UKF-NB-4 and UKF-NB-4^{HiGCV} cells as determined by gene microarray analysis.

Cell line comparison	differentially regulated probes	Overlap	Overlap (% probes differentially regulated in the same direction, i.e. up or down)
UKF-NB-4 ^{Hi} vs. UKF-NB-4	13,971	12,458 (12452 regulated in the same direction)	89.12%
UKF-NB-4 ^{HiGCV} vs. UKF-NB-4	14,060		88.56%
