

Supporting Information

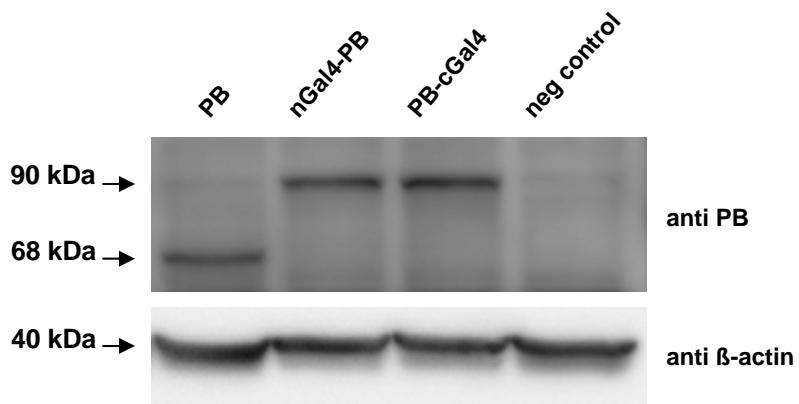

Figure S1. Western blot comparison of protein levels of native PB, N-terminal Gal4 PB, and C-terminal Gal4 PB. The larger size for nGal4-PB and PB-cGal4 samples is due to the Gal4 DBD fusion to the transposase. The negative control used was untransfected HEK293 cells.

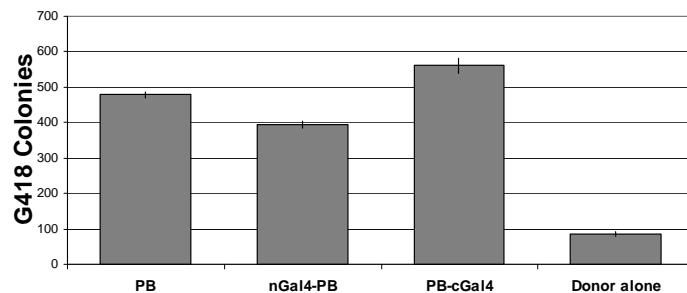

Figure S2. Comparison of plasmid integration efficiencies in HEK293 cells. Number of G418 resistant colonies from transfactions with native PB, N-terminal Gal4 PB, C-terminal Gal4 PB and transposase-negative control (n=3, mean \pm SD).

Table S1: Nested SB and PB Plasmid Primers

UAS-R Primary	CCTGCAGGTCGGAGTACTGT
UAS-F Primary	GCGCTCGCTAGAGTCTCC
TTAA-F Primary	TCCGGCCTTATTACACATTC
TTAA-R Primary	GGCTAAATACGGAAGGATCTGA
UAS-R	GAGACTCTAGCGAGCGCAAC
UAS-F	ACCTGCAGGCATGGAAGC
