

Supplemental Figure 4 NFATc1 localization in RANKL-treated or nontreated RAW 264.7 cells.

(A) The effect of RANKL-stimulation on localization of overexpressed NFATc1 in RAW 264.7 cells. Left graph indicates the ratio of NFATc1 staining in the nucleus relative to the entire cell in NFATc1 and HA-trCot co-expressing cells. Scale bars represent 20 μ m. Shown are means \pm SEM; n=30. **P < 0.01. (B) Localization of endogenous or exogenous NFATc1 in RANKL-treated multinuclear cells. Scale bars represent 20 μ m.
