B

Figure S1. Phylogenetic relationships among six *M. aeruginosa* strains used in this study. Pairwise evolutionary distance (A) and Neighbor-joining tree (B) of the six *M. aeruginosa* strains were calculated using MEGA 5 (1) from concatenated nucleotide sequences (2,992 b) of seven house-keeping genes (*ftsZ*, *glnA*, *gltX*, *gyrB*, *pgi*, *recA*, *tpi*) determined by (2). Sequences of the seven genes in PCC7806 were retrieved from the genomic contigs in the Genbank database.
