	SIO	NIO
Mutation model	F84	F84
Transition/transversion ratio	17.243159	11.329992
Site rate modifier (4 groups)	0.322599 1.744942 4.533686 9.388189	0.323263 1.734373 4.495796 9.299330
Probabilities of site rates	0.602957 0.357582 0.038922 0.000540	0.600390 0.359699 0.039363 0.000548
Prior distribution for mutation-scaled population size	Uniform with range 0.0 to 1.5	Uniform with range 0.0 to 1.0
Prior distribution for mutation-scaled migration rates	Uniform with range 0.0 to 5000	Uniform with range 0.0 to 2000
Proposal distribution for parameters and genealogies	Slice sampling	Slice sampling
Increment between samples	200	200
Samples per replicate	5'000	5'000
Burn-ins per replicate	100'000	100'000
Replicates	32	32
