

Figure S2. Proportion of CD4⁺Foxp3⁺ and CD4⁺ T cells to gated hepatic lymphocytes during the course of *L. donovani* infection by flow cytometry analysis.

Hepatic lymphocytes were isolated from the liver of *aly/+* and *aly/aly* mice at indicated time points after *L. donovani* infection and stained with anti-CD4, CD8 and Foxp3 antibodies. Percentage of CD4⁺ T cells (white bars) and CD4⁺Foxp3⁺ T cells (black bars) of *aly/+* (A) and *aly/aly* mice (B) are shown.
