

SUPPLEMENTARY FIGURE 2. Exogenous IL-10 represses cytokine gene transcription and activates STAT3 independently of TTP. **A**, BMDMs were incubated for 2 hours with LPS in the absence (-) or presence (+) of IL-10 (10 ng/ml) and ChIP was performed with IgG control or anti-RNA Pol II antibody. Each measurement represents the mean and SD ($n=3$). **B**, BMDMs were incubated in the absence (-) or presence of IL-10 (10 ng/ml) for the indicated times and lysates were prepared for immunoblot analysis of STAT3 phosphorylation. **C**, Relative amounts of STAT3 phosphorylation were determined relative to total STAT3. Each measurement represents the mean and SD ($n=3$).
