

Figure S5.

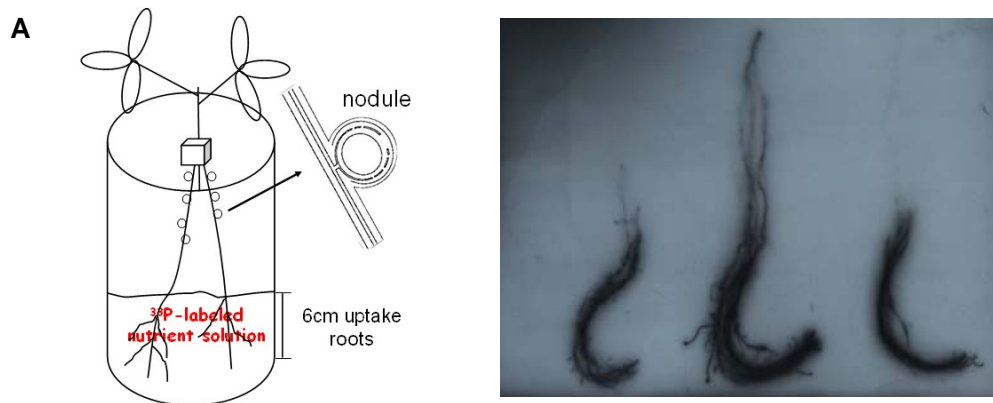

Figure S5. *In situ* assays for [³³P] Pi uptake using transgenic composite soybean plants. A, Graphical representation of the soybean roots treated in the [³³P] Pi solution. The bottom 6 cm of root regions were directly immersed in the ³³P labeled nutrient solution. Arrows indicated that the nodules in the upper roots were not exposed to the ³³P labeled nutrient solution. B, Autoradiograph of [³³P] Pi taken up by the bottom 6cm root regions.
