

Figure S1. Bioassay on bud outgrowth using hydroponic culture; comparison of activity of GR24 and GR5. Axillary bud length at each node of *rml* plants 2 weeks after treatment. Lram Ni-j = ramification length at node i; j=1 means the main branch at this node; j=2 means the second branch at this node when visible (data are means \pm SE ($n = 12$)). CTL 0 = control 0.
