

Figure S3. Effect of different strigolactones (500 nM) on *PsBRC1* transcript levels in axillary bud at node 3 of *rms1* plants. Plants were treated by direct application on the bud. Buds 6 h after treatment. Data are means \pm SE ($n = 3$ pools of 30 plants). Values that have the same letter (a-c) are not significantly different at the $P = 0.05$ level. CTL 0 = control 0.
