

Figure S1

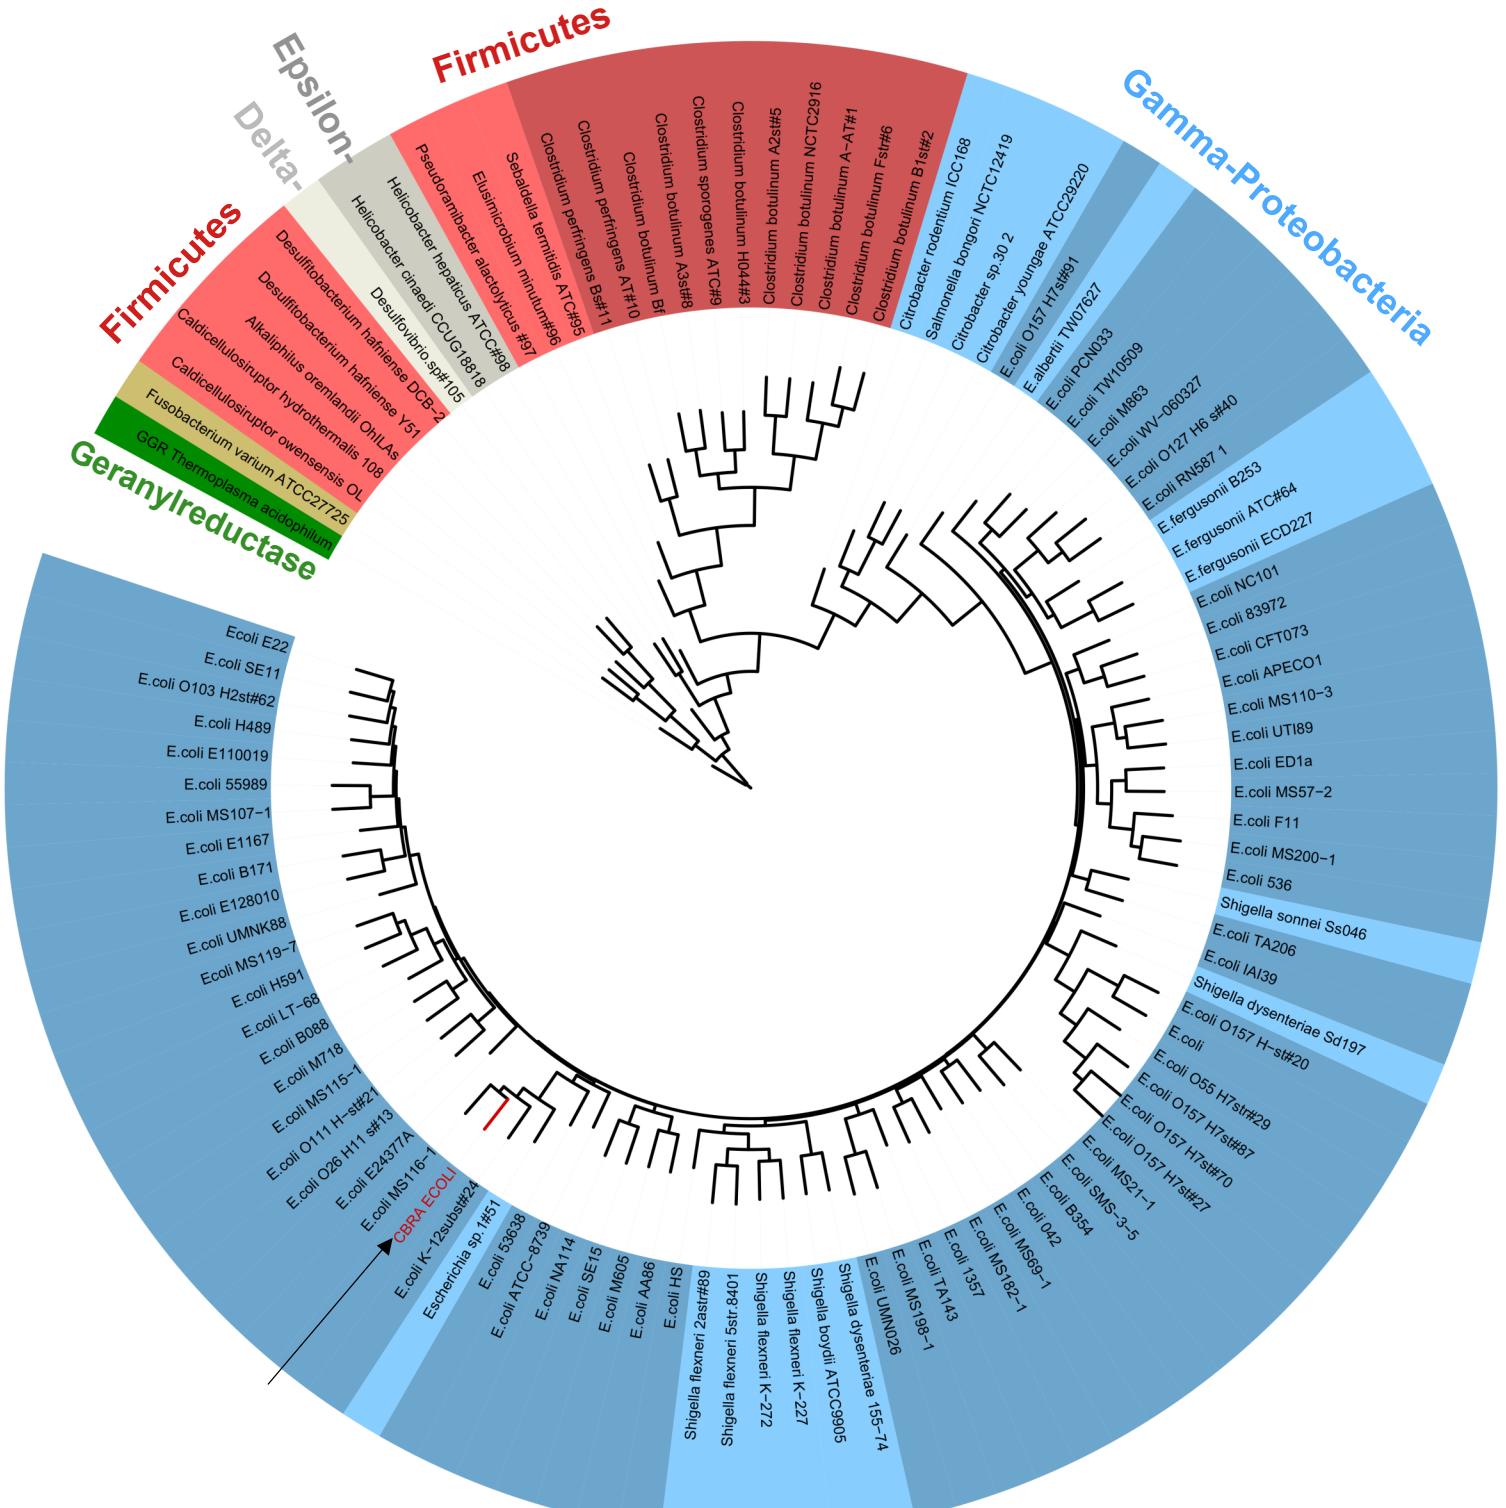

Figure S1. Phylogenetic Tree of CbrA Proteins. Multiple sequence alignments of CbrA proteins and the geranylreductase of *T. acidophilum* - used as an outgroup - for phylogenetic inference were computed with PROMALS 3D (3).

Phylogenetic analysis was conducted with PHYLIP-NEIGHBOR using the JTT model (1). The arrowhead indicates the gene expressed for this study. The consensus phylogenetic tree is drawn with iTOL (<http://itol.embl.de/>) (2).
