

Figure 2. Localization of VEGF expression in epithelial cells of OVA sensitized and challenged mice. Fluorescent immunohistochemistry was used to identify the location of CC10 (red, panels a and c) and VEGF (green, panels b and c). Double immunohistochemistry is illustrated in panel c. VEGF was expressed in most of the CC10 (+) cells (yellow, arrows) and also in cells that did not express CC10 (green only) (a and b, 40X; c, 60X).
