Figure S3 Cep57 depletion suppresses centriole over-duplication. **(A)** The graph shows the percentage of siRNA-transfected CHO cells with different numbers of centrioles. A minimum of 200 cells was counted per sample in three independent experiments. Error bars represent mean $\pm$ SEM. ** $P = 0.002$, unpaired Student's t-test. **(B** and **C)** The graphs show the percentage of HU-treated CHO cells with different numbers of centrioles **(B)** or centrosomes **(C)**. A minimum of 200 cells was counted per sample in three independent experiments. Error bars represent mean $\pm$ SEM. ** $P < 0.001$, unpaired Student's t-test.
