

Supplemental Data. Figure S4

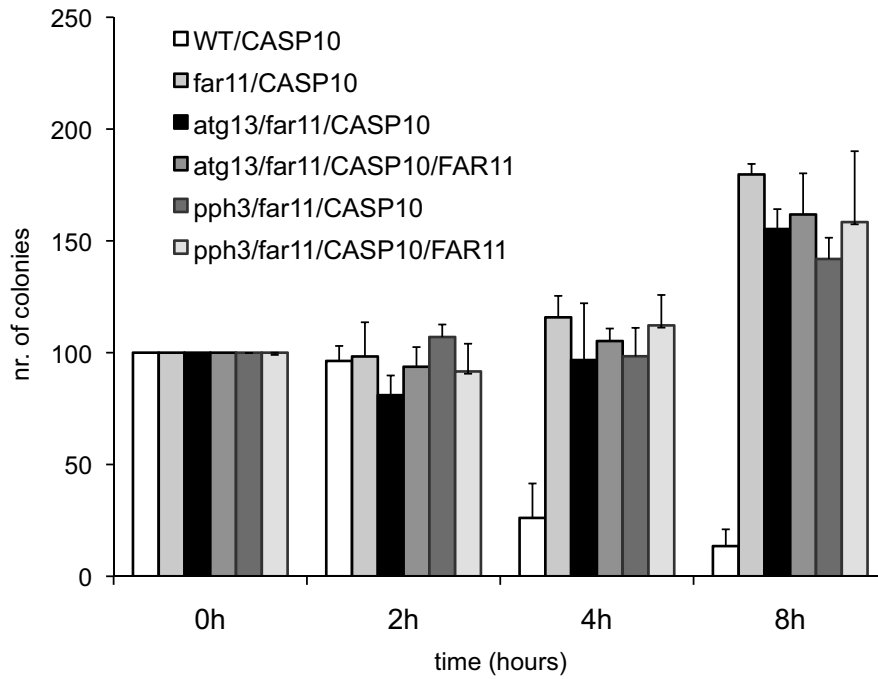

Figure S4. Far11 functions upstream of Atg13 and Pph3 in the caspase-10 signaling in *S. cerevisiae*. Clonogenic assay of the yeast strains *far11* Δ , *atg13* Δ and *far11* Δ , *pph3* Δ expressing human *CASP10* and an episomic copy of *FAR11*. Data are presented as percentages of surviving colonies as referred to non-inducing conditions.
