

Fig.S1. A. Selection scheme for dihydroartemisinin (DHA) resistance in Dd2 strain. Dd2 parasites were subjected to step-wise selection with increasing DHA concentrations starting at 10 nM. When steady growth of parasites was achieved, DHA concentration was doubled. After 15 months, the parasite population was able to grow under constant exposure to 320 nM of DHA. **B. DHA IC₅₀ values of cloned parasites.** The DHA-resistant population was cloned in DHA-free medium in ~35 days. IC₅₀ values of the 26 clones to DHA were measured using the SYBR-Green I method. Shown are the mean IC₅₀s of individual clones. Two clones (DHA1 and DHA2) with the highest DHA IC₅₀ values were selected for future studies.

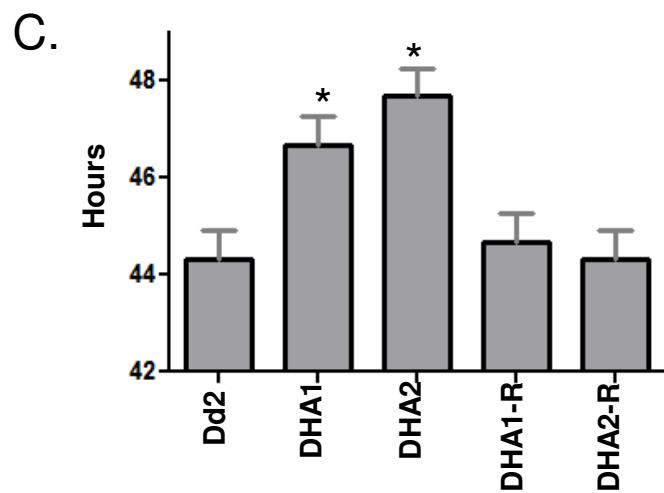

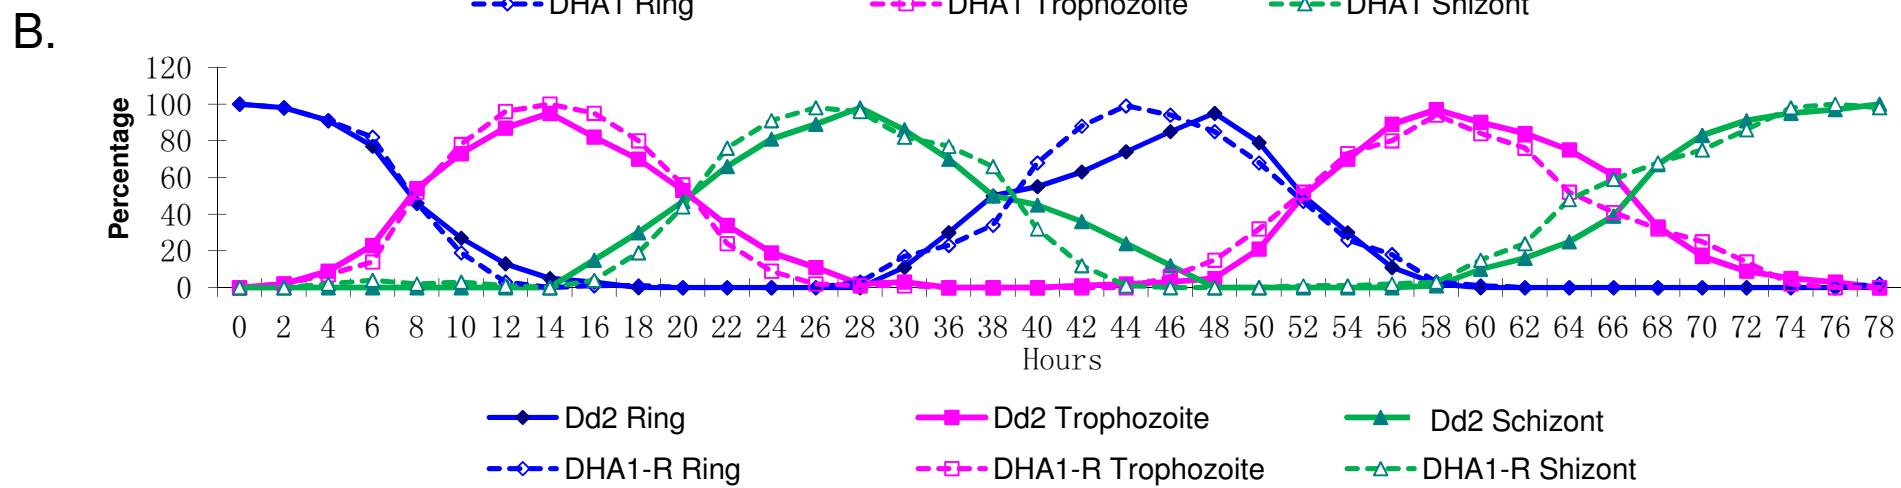

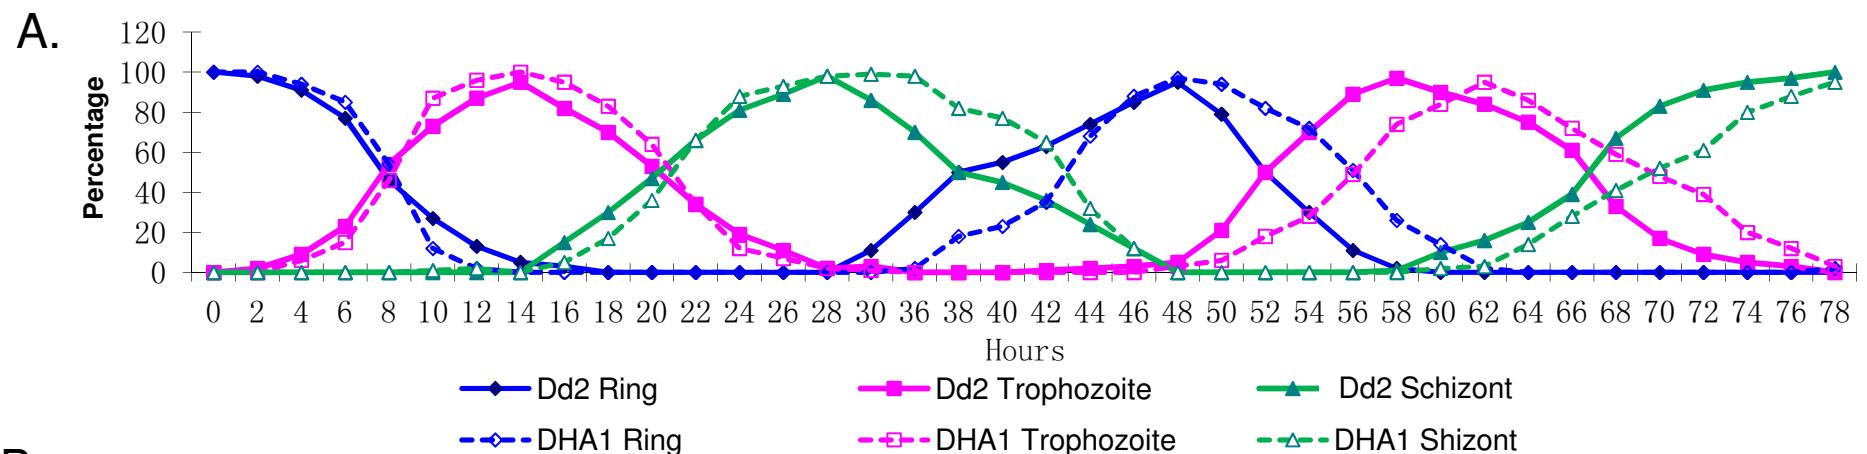

Fig.S2. Cycle duration of Dd2, resistant line DHA1 and revertant line DHA1-R. Parasite lines were synchronized and purified schizonts were used to start ring stage culture. Smears were made every 2 h and percentage of each stage was counted (y-axis).

A. Duration curves of three stages of Dd2 and DHA1.

B. Duration curves of three stages of Dd2 and DHA1-R.

C. Cycle duration. Asexual erythrocytic cycle duration was defined as the duration between two peaks of trophozoite stage. Asterisks indicate significant difference when compared with Dd2 (unpaired *t* test, $P < 0.017$).

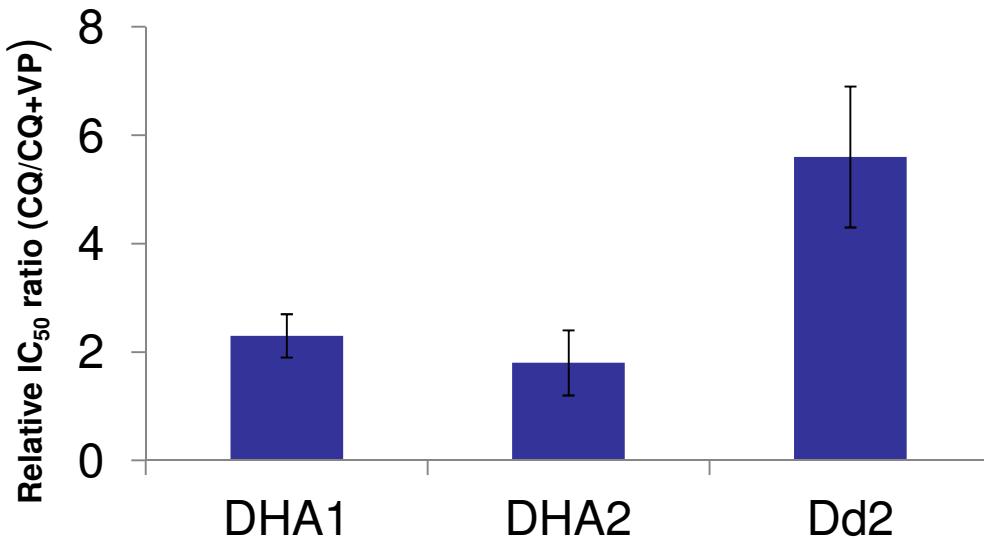

Fig. S3. Relative IC_{50} ratios of CQ in DHA1, DHA2 and Dd2 in the presence of verapamil (VP). Relative ratio was calculated by comparing the IC_{50} values of CQ alone with those of CQ/VP treatment. A CQ:VP ratio of 2:25 μ M was used for the assay. The VP concentrations used do not have obvious cytotoxic effect on the parasites (Patel et al. 2010).

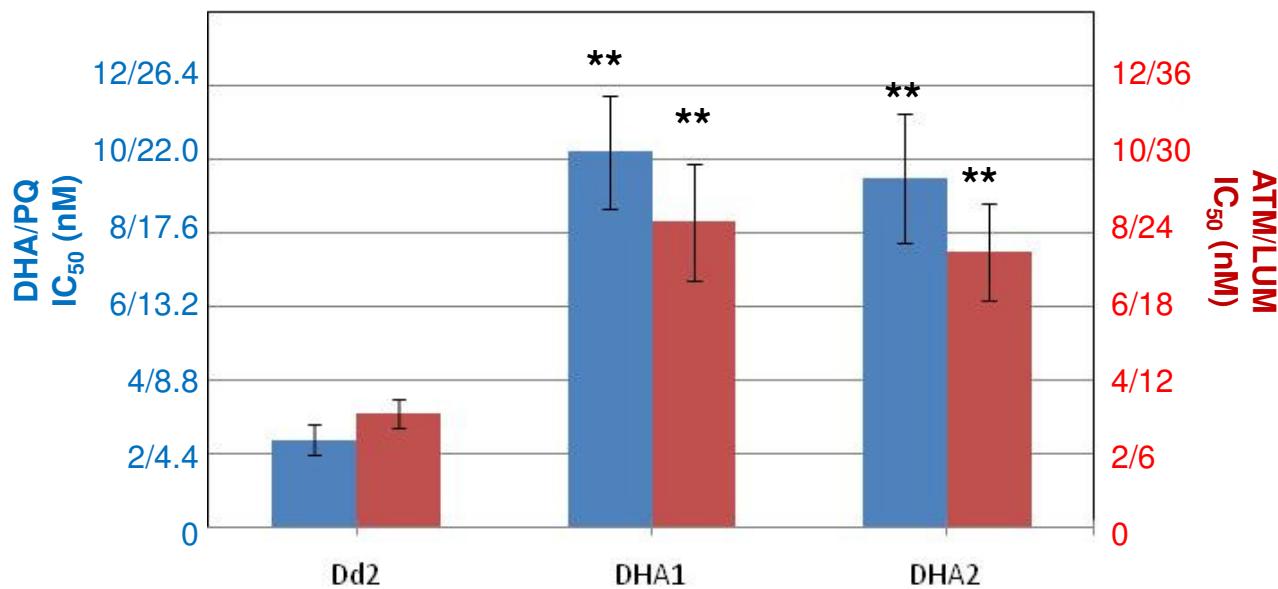

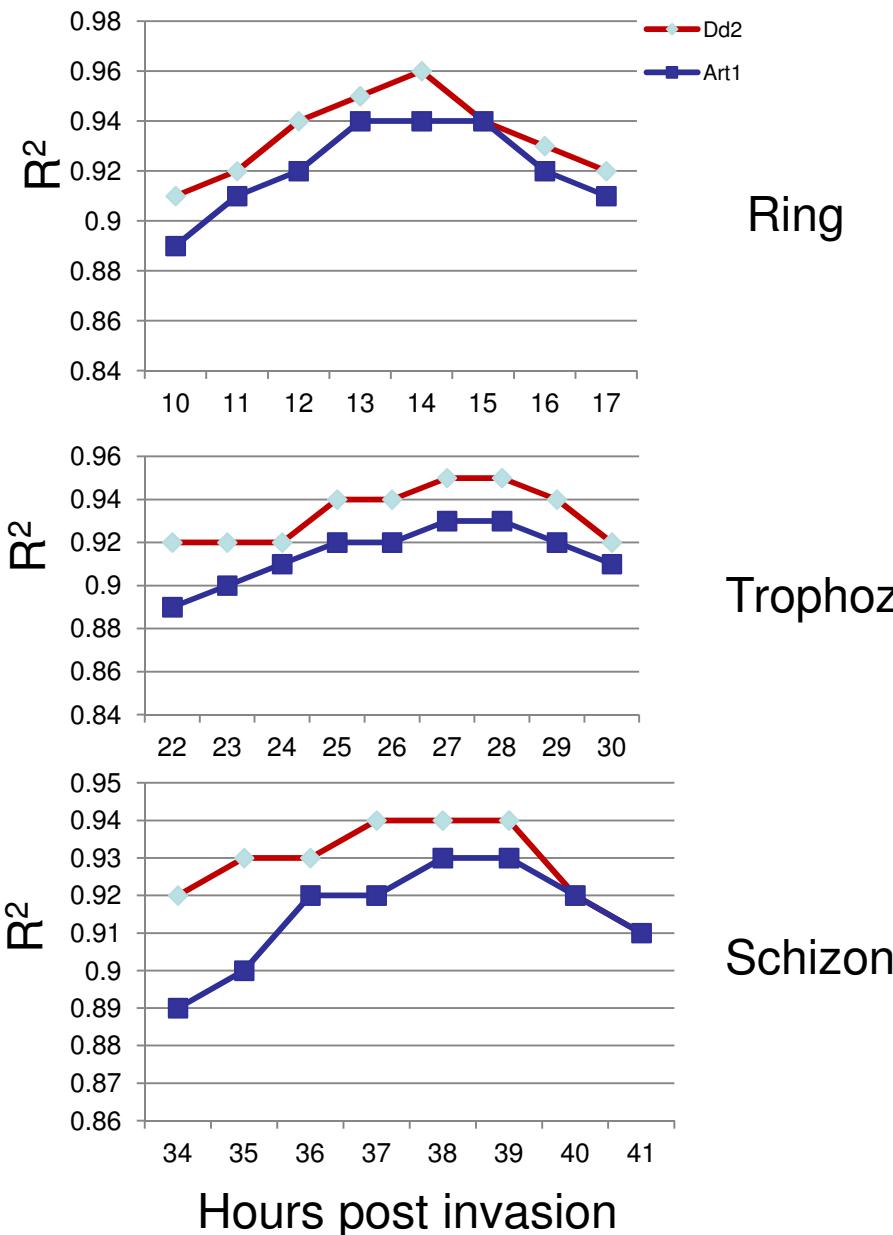

Fig.S4. In vitro IC_{50} values of Dd2, DHA1 and DHA2 to two ACTs: dihydroartemisinin with piperaquine (DHA/PQ) (blue bars) and artemether with lumefantrine (ATM/LUM) (red bars).

** indicates significant difference between Dd2 and DHA1 or DHA2 (unpaired t-test, $P<0.003$)

Fig.S5. Correlations in microarray data between Dd2 and DHA1 at different time points with the published 48 h gene expression profile of Dd2 (Llinas et al. 2006).
 Microarray data from two experiments were normalized, averaged, and \log_2 transformed. Pearson correlation was performed between our microarray data and the published Dd2 gene expression profile.

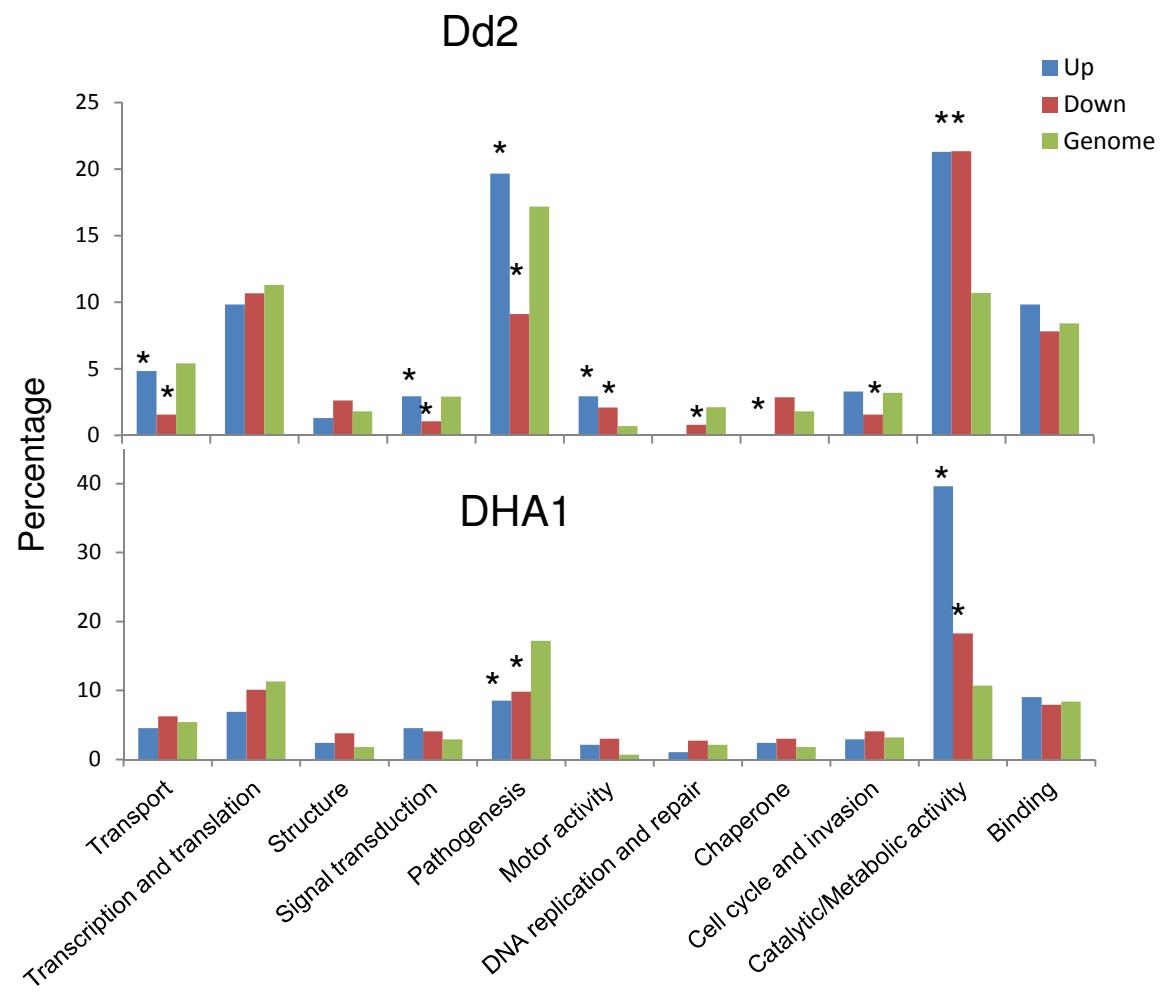

Fig. S6. Microarray analysis to detect perturbation in genome-wide gene expression after DHA treatment. **A.** Numbers of genes with ≥ 2 -fold changes in the expression level after DHA treatment DHA1 and Dd2 at three IDC stages. Note that significantly more genes were down-regulated than up-regulated in Dd2 parasite by DHA treatment (Z -test, $P < 0.05$). **B.** Percentage of different functional categories of genes in the gene pools with ≥ 2 -fold up (blue) and down (red) regulation are compared to the overall genomic representations of the functional categories (green) in Dd2 (upper panel) and DHA1 (lower panel) in response to DHA treatment. Genes encoding hypothetical proteins are not shown. Asterisk (*) denotes categories significantly enriched in up- or down-regulated gene pools as compared genomic representations (Z -test, $P < 0.05$).

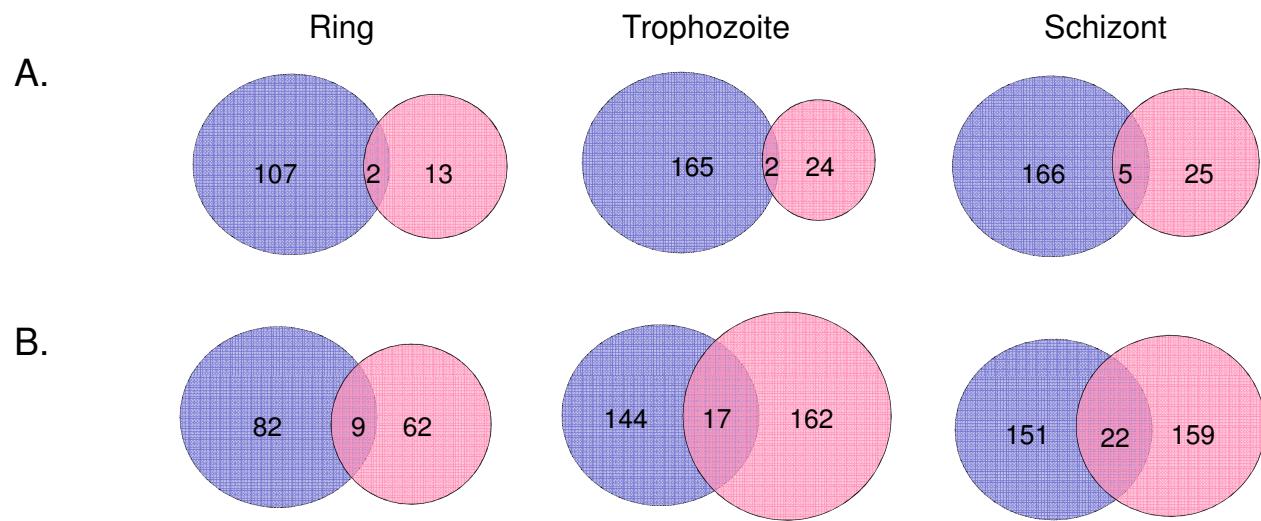

Fig. S7. Overlapped genes in DHA1 (blue) and Dd2 (pink) that had ≥ 2 -fold changes after DHA treatment. A. Up-regulated genes after DHA treatment; **B.** Down regulated genes after DHA treatment.

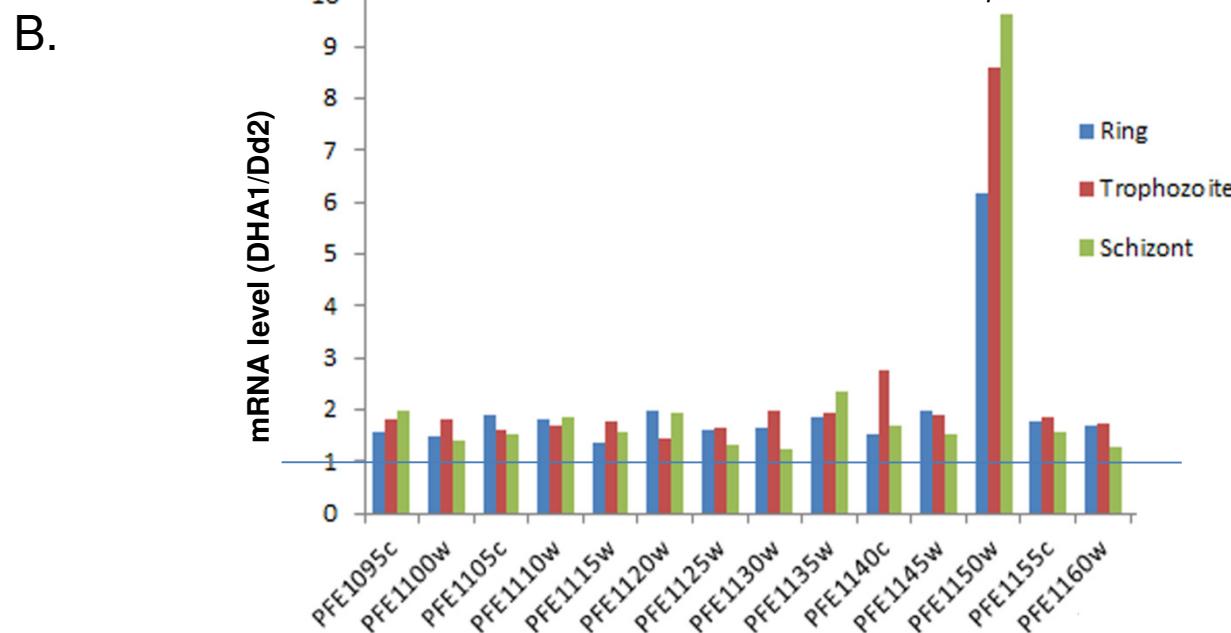

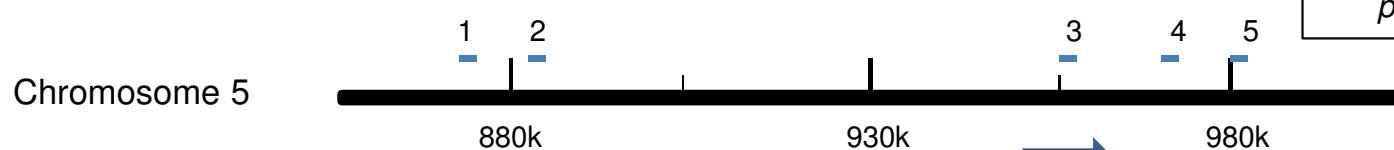

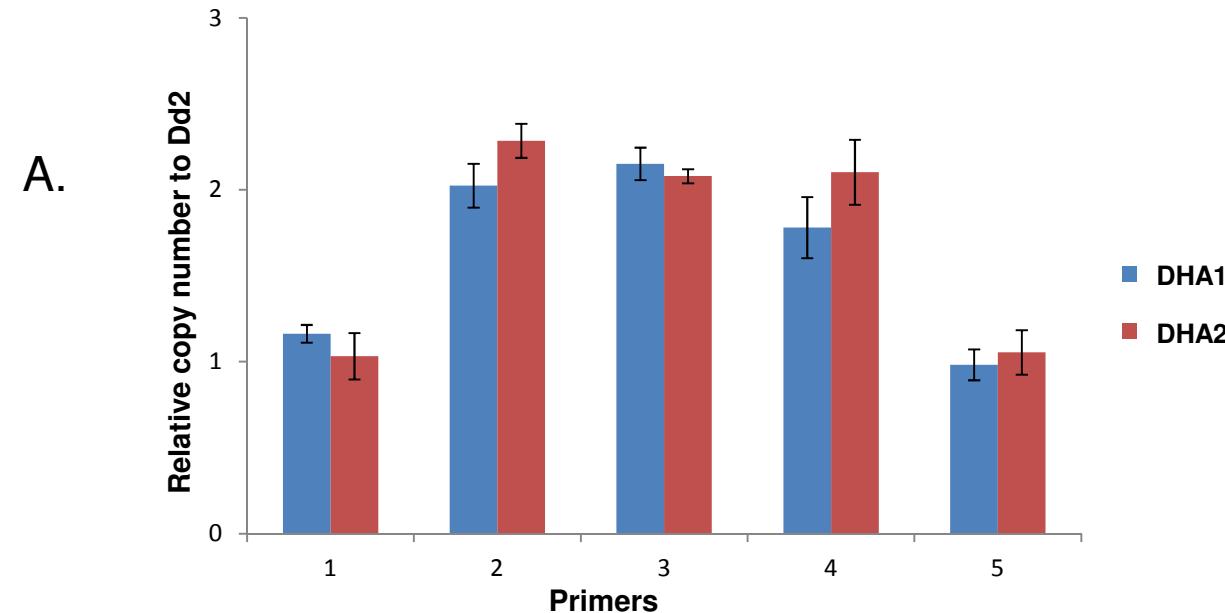

Fig. S8. Gene copy numbers and mRNA expression levels of genes at the amplified locus on chromosome 5.

- A. Real-time PCR analysis of amplification region on chromosome 5. Gene copy number was compared to that in Dd2.
- B. Relative mRNA levels (DHA1/Dd2, microarray data) of 14 genes which are in the amplified region of chromosome 5 (PFE1150w is *pfmdr1*).

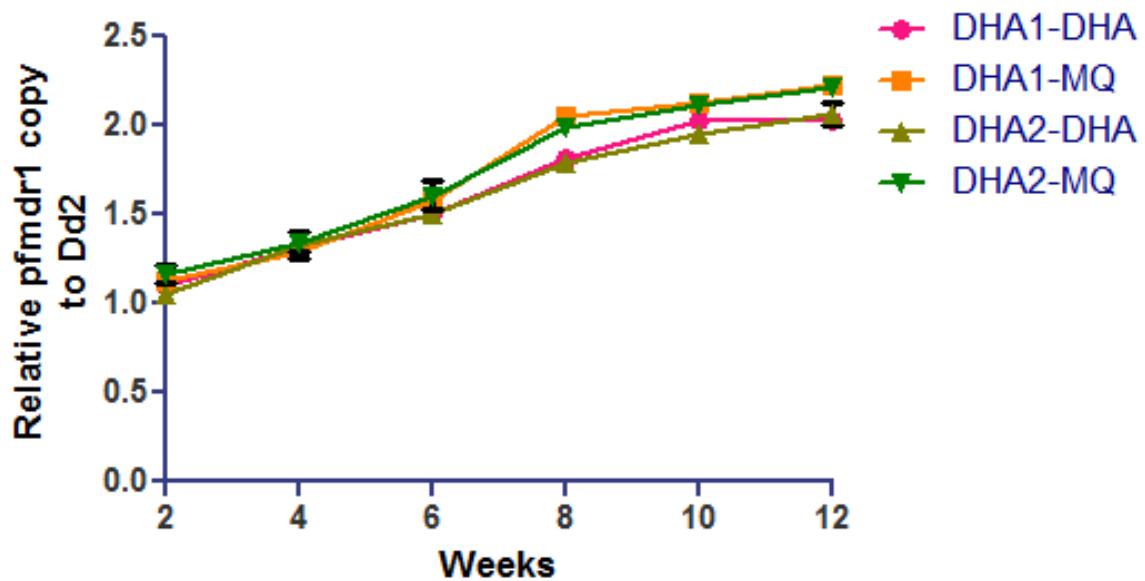

Fig. S9. Gene copy numbers of *pfmdr1* in the revertant lines during re-selection with either dihydroartemisinin (DHA) or mefloquine (MQ). Real-time PCR was performed at a bi-weekly interval and the *pfmdr1* copy number in *Dd2* was used as the reference .

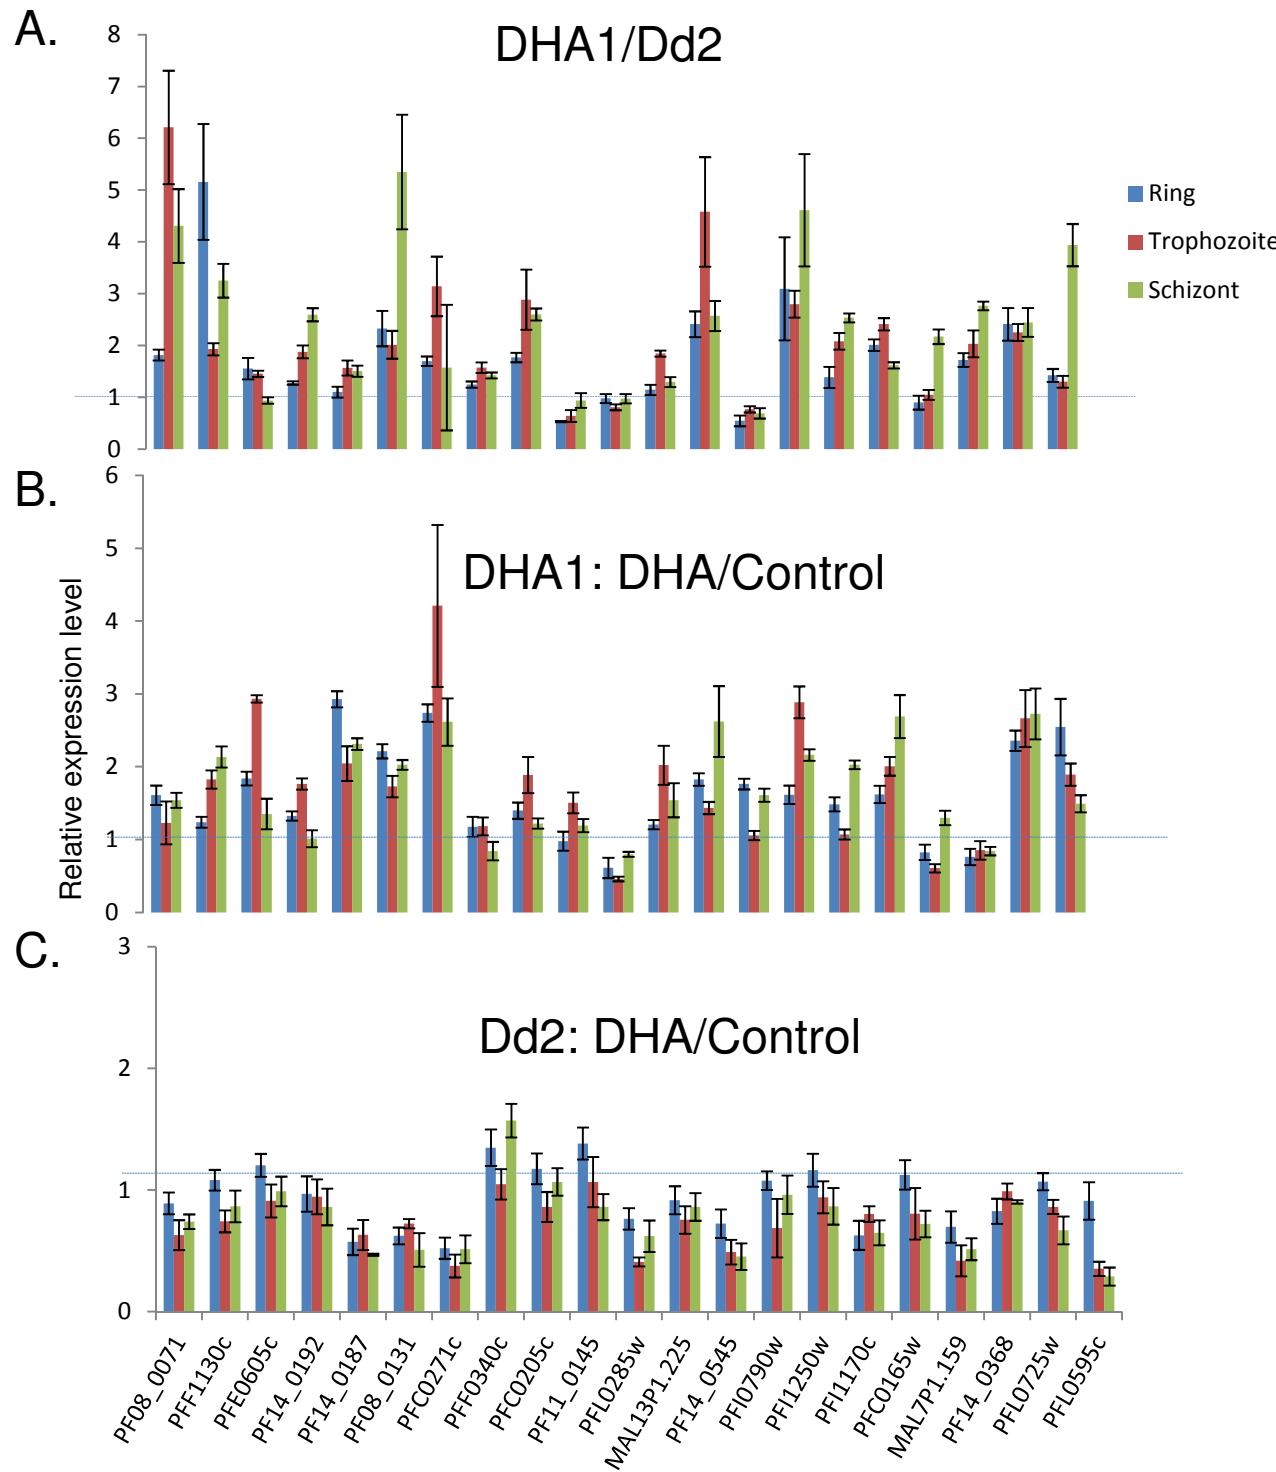

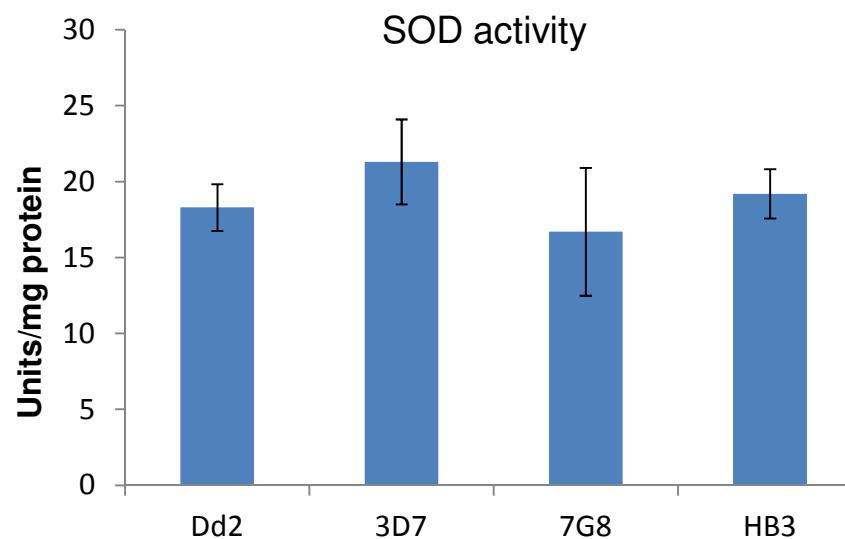

Fig. S10. Real-time RT-PCR analysis of mRNA expression levels of antioxidant associated genes in Dd2 and DHA1 in ring (blue), trophozoite (red) and schizont (green) stages.

Relative expression of these genes were compared: **A.** between DHA1 and Dd2; **B.** Between DHA treated DHA1 and untreated (control) DHA1; and **C.** Between DHA treated Dd2 and untreated (control) Dd2. Relative expression levels in ring (14 h), trophozoite (28 h) and schizont (38 h) stages were determined by real-time RT-PCR compared to constitutively expressed seryl-tRNA synthetase.

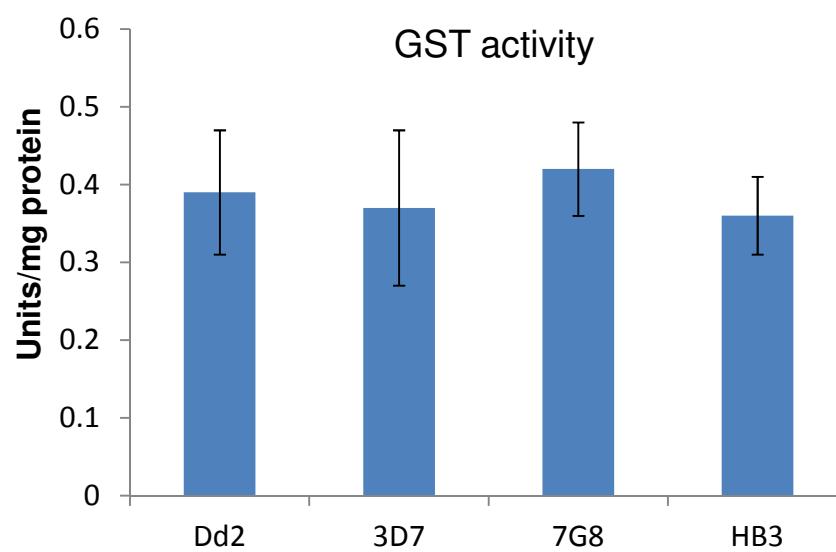

Fig. S11. SOD and GST activities in different parasite strains. The result represents mean \pm standard deviation from three replications. No significant differences were detected between the strains (unpaired t test, $P>0.013$). **A.** SOD activity; **B.** GST activity.

Table S1. Person correlation (R^2) matrix of IC₅₀s of Dd2, two DHA-selected clones (DHA1 and DHA2), their respective revertant lines DHA1-R and DHA2-R, and re-selected lines by DHA (DHA1-R-DHA and DHA2-R-DHA) and MQ (DHA1-R-MQ and DHA2-R-MQ) between two drugs (above diagonal). P values between each comparison are shown below the diagonal.
