

FIG S1 Validation of identified shRNAs. (A) Validation of identified genes. Suppression of targets by individual shRNAs. shRNAs available from each gene identified in the screen were used to infect BJ cells and the degree of suppression determined. For each gene depicted in the graph, the first bar is a control shRNA normalized to 1, and subsequent bars represent knockdown from shRNAs targeting that gene. Bars colored red indicate the shRNAs isolated from the original screen. Error bars indicate the standard deviation of triplicate measurements. (B-F) Proliferation of cells with suppression of identified genes. Cells described in part A which demonstrated successful knockdown were allowed to proliferate toward replicative senescence. The number of PDs achieved was measured at the time points indicated and reported as the average number in singleton experiments of cumulative PDs for each line.

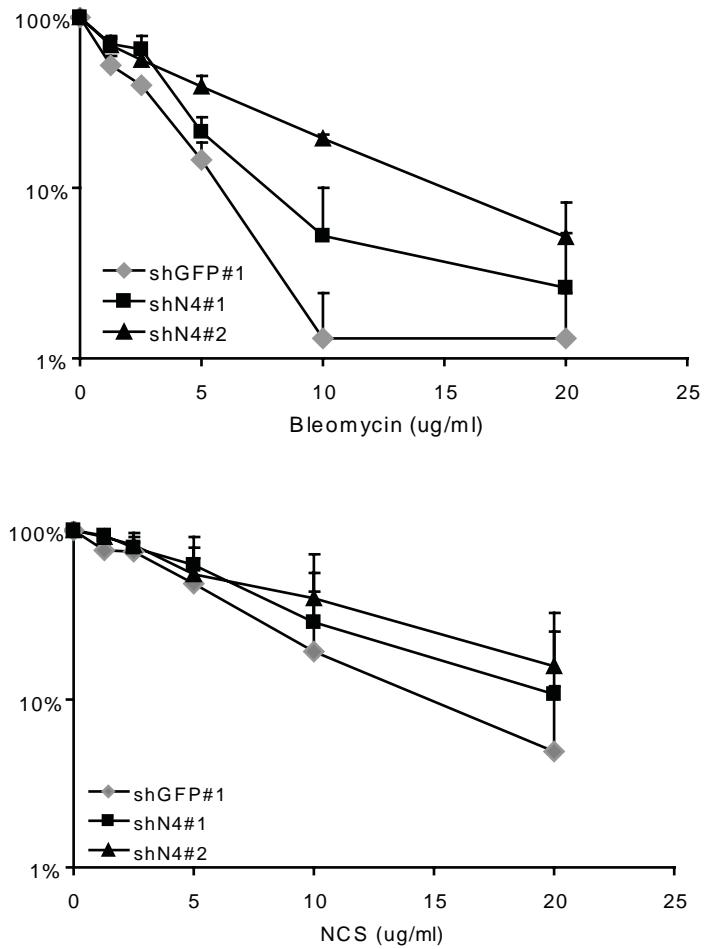

FIG S2 *NEK4* suppressed cells are less sensitive to double-stranded DNA damaging drugs neocarzinostatin and bleomycin. Colony formation assays to examine sensitivity of control (shGFP #1) or *NEK4* suppressed (shN4 #1 and #2) BJ fibroblasts to treatment with neocarzinostatin (NCS) (top) or bleomycin (bottom). Survival is expressed as a percentage of colonies formed compared to mock-treated cells after treatment with the indicated amounts of drug. Error bars indicate the standard deviation of triplicate experiments.

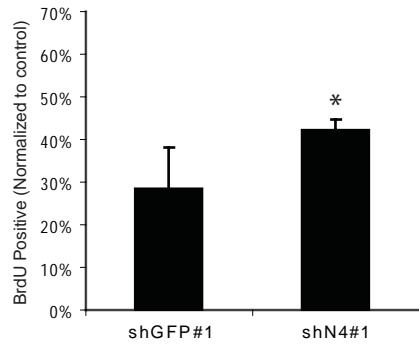

FIG S3 Suppression of *NEK4* in IMR-90 cells impairs cell cycle arrest. BrdU incorporation assays to assess cell cycle arrest of control (shGFP #1) or *NEK4* suppressed (shN4 #1) IMR-90 fibroblasts in response to treatment with etoposide. Bars indicate the percentage of cells that were BrdU positive following treatment with etoposide, normalized to percentage of BrdU-positive mock-treated cells. Error bars represent the standard deviation of triplicate experiments. *= p<0.035, compared to shGFP #1 control.

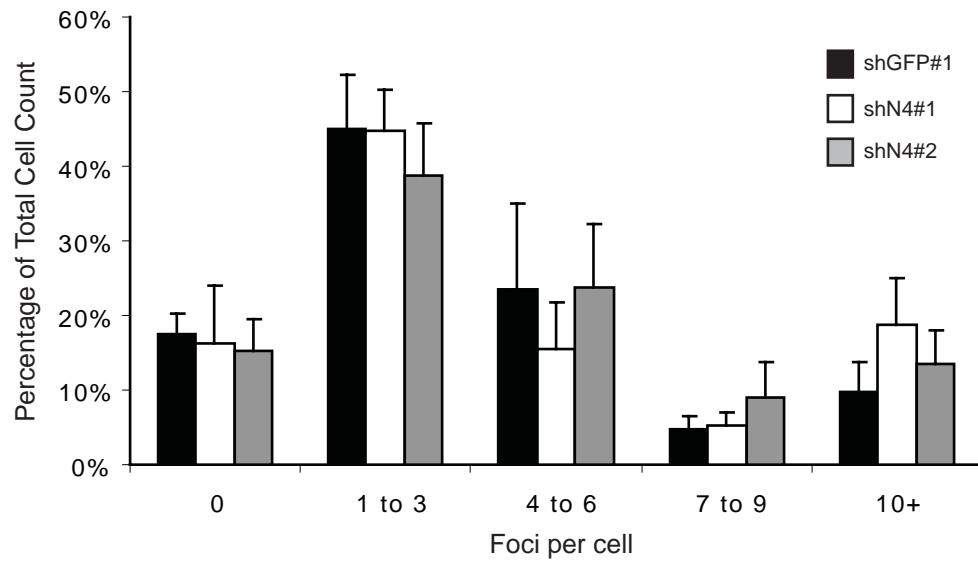

FIG S4 γ -H2AX foci in BJ shGFP and BJ shN4 cells. The number of γ -H2AX foci were scored in asynchronous BJ cells expressing either a control shRNA (shGFP #1) or one of two shRNAs targeting *NEK4* (shN4 #1 and #2). The bars indicate the percentage of cells that contained the indicated number of foci. At least 150 cells were counted per cell line per replicate. Error bars represent the standard deviation of triplicate experiments.
