

Figure S1: DUX4-fl mRNA expression in biopsies detected at 55 PCR cycles.

Polyadenylated DUX4-fl mRNA was detected from biopsy mRNA using nested RT-PCR (25 cycles followed by 30 nested cycles). DUX4-fl mRNA was expressed in 22 out of 45 FSHD biopsies and 1 out of 34 control biopsies (Figure 3; cohort 03). Sequencing confirmed spliced DUX4-fl mRNA expression (arrows). One of three independent replicate experiments is shown.

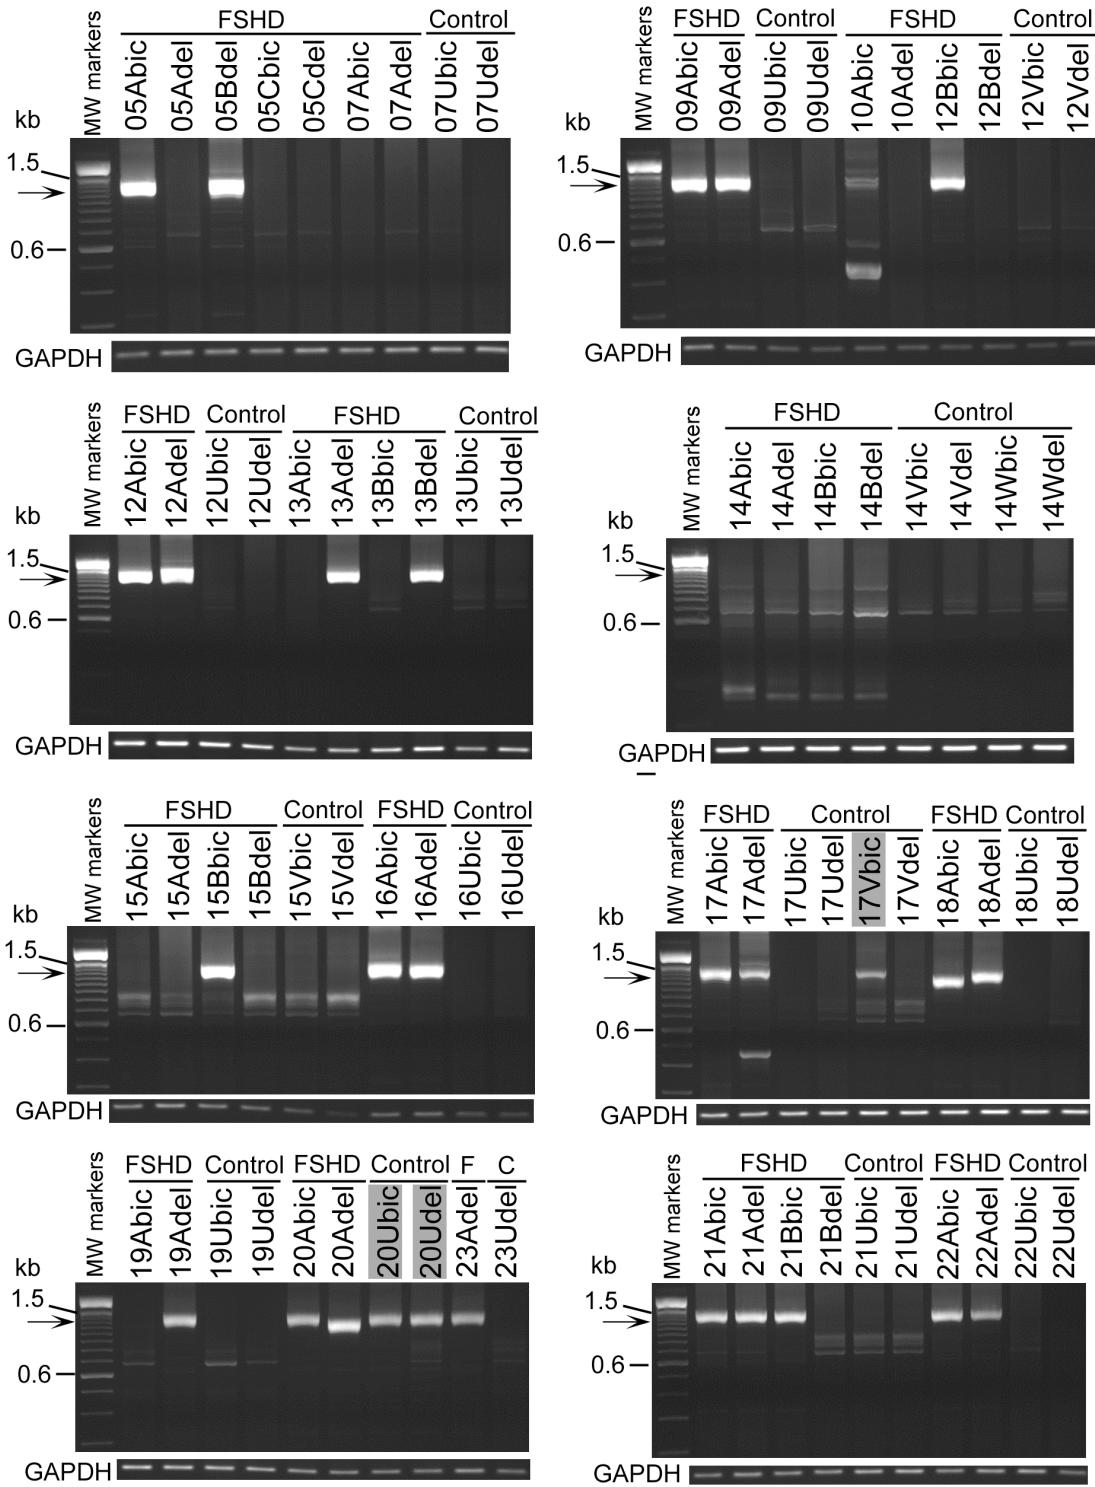

Figure S2: Polyadenylated DUX4-fl expression in biopsies detected at 65 PCR cycles.
 Nested RT-PCR (25 cycles followed by 40 nested cycles) from biopsy mRNA. Sequencing confirmed spliced DUX4-fl mRNA expression (arrows) was detectable in 3 out of 33 unaffected biopsies (gray boxes; 17Vbic, 20Ubic, 20Udel) from two control individuals (17U, 20U) and 26 out of 44 FSHD biopsies. Gray shading indicates DUX4-fl expression in control biopsies. One of two independent replicate experiments is shown.

Table S1: Summary of individual DUX4-fl assays

Control Subjects	RT-PCR Day 0	RT-PCR Day 4	RT-PCR Biopsy (55)	RT-PCR Biopsy (65)	DUX4-FL ICC	4qA (kb) <i>EcoRI/BlnI</i>

= DUX4-fl expression from unaffected subject

For RT-PCRs, each + or - reflects the result of one repetition

nd = not determined

^a no 4qA alleles detected

For ICC, cells are classified as + if one or more nucleus shows a positive immunostaining for DUX4-FL protein
