**A**

B

Figure S1. Degradation of endogenous cyclin B1 is accelerated in Fzr1[-/-] oocytes. (A) Samples of 50 oocytes were immunoblotted for cyclinB1 and GAPDH at the times indicated post GVB. Shown is a representative blot from 2 separate experiments. (B) Densitometric analysis of levels of cyclinB1, normalized to GAPDH from immunoblots represented in (A) Data points represent the mean from 2 separate experiments, error bars show s.d.
