

Supplementary Figure 1

Supplementary Figure 1. Shp2 depletion decreases taxol-induced mitotic arrest. HeLa cells were transfected with control or Shp2 siRNA. Forty-eight hours later, transfected cells were treated with taxol (10 μ M) for 16 hours. Percentages of mitotic cells were determined by PI and phospho-histone H3 double staining and FACS analyses as described in Figure 1. The data shown are mean \pm S.D. of three independent experiments.
