

Vinpocetine suppresses pathological vascular remodeling through inhibiting vascular smooth muscle cell proliferation and migration

Yujun Cai, Walter E. Knight, Shujie Guo, Jian-Dong Li, Peter A. Knight and Chen Yan

Supplemental Figure S1. Vinpocetine administered systemically reduces neointimal formation and thrombosis. Images of left carotid arteries from mice underwent complete ligation for 14 days, systemically treated with saline or vinpocetine (5mg/kg/day) via i.p.
