

SUPPLEMENTARY DATA

TABLE S1. Information on all individual plants utilized in the study. For each individual, the taxonomic designation, a population number, individual name, location in latitude and longitude is provided. Ploidy level corresponds to mitotic or meiotic counts (number of samples refers to number of slides prepared per individual) or to inferred ploidy based on 2C estimates from flow cytometry (average 2C values are reported for an individual if there were multiple flow cytometry estimates).

Taxa	Population	Plant	Latitude	Longitude	Ploidy level	n	2n	2C pg (# samples)
						(# of samples)	(# of samples)
