

Supplementary Fig. S6 Migration of stromal cells in response to Hec1a conditioned media. Migration assays were performed in transwell plates with 8 μ M pores in 48 hour conditioned Hec1a serum-free media. Quantification of migrated cells is shown with significantly ($p < 0.05$, Student's *T* test) more O-ASC and BM-MSC migrating in response to Hec1a-conditioned media as compared to SC-ASC and WI38 fibroblasts.
