

Supplemental Figure S4. Examples of known and novel snoRNA-derived miRNAs bearing atypical folding structures. (A) Folding structure of snoRNA HBI-100 carrying an annotated miRNA, mmu-miR-1843 with 4.5 unpaired bases in the central bulge, indicated inside the red ellipsis. (B) Folding structure of SNORA1 carrying novel sno-miR-#9 with 5 unpaired bases in the central bulges.

A. mmu-miR-1843/ snoRNA HBI-100

B. sno-miR-#9
