

Table S4. Comparison of differentially methylated genes between genome-wide profiles and 67 known methylated genes in PCa.

	HM450	N-NGS ¹	HM27
No. of indentified genes*	2874	2318	363
No. of common genes	32	20	15

* The number of promoter hypermethylated genes in each data set.

¹ Cancer-specific methylation only (Group 1 and 2 only)
