

Figure S5. Chlorophyll content of wild-type, *P35S:NF-YA* and *P35S:miR169nm* lines.

Total chlorophyll content of plants grown on 0.1 X MS agar plates for 2 weeks was measured and normalized per milligram fresh weight of sample. Values represent means and SD of three biological replicates statistically treated using a student *t*-test (* $P < 0.05$, ** $P < 0.001$, *** $P < 0.0001$).
