

Figure S8. Dark-induced cell elongation is affected in *NF-YA* overexpressing plants.

(A) Scanning electron microscope images of 5-day-old dark-grown (from left to right) *P35S:NF-YA2*, *10*, *7*, *3*; WT and *P35S:miR169nm* seedlings. Bar = 200 μ m. **(B)** Dark/Light relative hypocotyl length of 5-day-old WT, *P35:NF-YA* and *P35S:miR169nm* seedlings. Light and dark-grown hypocotyl length was measured and the data used to calculate the relative value. Values are means and SD of three biological replicates statistically treated using a student *t*-test (* $P < 0.01$).
