

Supplementary Figure 1. (a) INSL3 binding to, and cell surface expression of, chimeric extracellular domain (ECD) only receptors expressed in HEK-293T cells. (b) Eu-H2 relaxin binding to and cell surface expression of, chimeric extracellular domain (ECD) only receptors expressed in HEK-293T cells. (c) INSL3 binding to, and cell surface expression of, ECD-1 mutants containing the individual substitutions that comprise ECD-1^{2β1}. These data were used to calculate the ratio of specific Eu-INSL3 binding to the cell surface expression of each construct as displayed in Figure 2 (a, b and d).
