

Supplemental Table 2. Correlation analysis between HOPX- β methylation status and clinicopathological variables (n= 89)

Variables	Total number	HOPX- β hypermethylation			P value
		negativity	positivity	positive rate (%)	
Age(years)					
<65	51	12	39	76	0.28
≥65	38	3	35	92	
Gender					
Male	46	7	39	85	0.66
Female	43	8	35	81	
preoperative serum CA19-9					
<37 U/ml	23	2	21	91	0.33
≥37 U/ml	66	13	53	80	
Location					
head	68	12	56	82	0.81*
body	15	2	13	81	
tail	6	1	5	83	
Growth pattern					
nodular	35	5	30	86	0.6
other	54	10	44	81	
Histology					
well	37	8	29	78	0.45*
moderately	34	5	29	85	
poor	18	2	16	89	
tumor size (cm)					
≤2	13	3	10	77	0.16*
