

Figure S1 Level of Fz expression from the *Act5C-fz* transgene. Western blot of 28 hr pupal wing extracts from w^{1118} , fz^{P21} and $w; Act5C-fz/+; fz^{P21}$ animals, probed for Fz protein (upper panel) or Actin (lower panel). One copy of the *Act5C-fz* transgene gives about five-fold higher expression of Fz than two copies of the endogenous gene as seen in the w^{1118} control strain.
